

TropOS 2410

Wireless mesh router for DIN-rail mounting

TropOS 2410 wireless mesh routers are used to build field area networks for automation applications. Incorporating a managed four-port Ethernet switch, voltage monitoring and contact closure monitoring, they enable cost-effective and highly secure IP communications.

The TropOS 2410 is built for utility, oil and gas, mining, and industrial applications that monitor and control field automation endpoints such as intelligent electrical devices, industrial process controllers and SCADA devices. Ethernet and serial interfaces supporting DNP3 and Modbus provide future-proof operation to new and legacy devices. An integrated firewall and VPN provide enterprise-class security. These enterprise security features extend to the wired Ethernet and serial ports as well as to the wireless interface. The Tropos 2410 extends the functionality of TropOS mesh networks to devices where installation of standalone TropOS routers is impractical. An integrated GPS receiver greatly simplifies installation, commissioning and asset tracking.
