eXLerate® - software platform

Spirit IT
Innovative Technologies

Spirit IT, the Netherlands

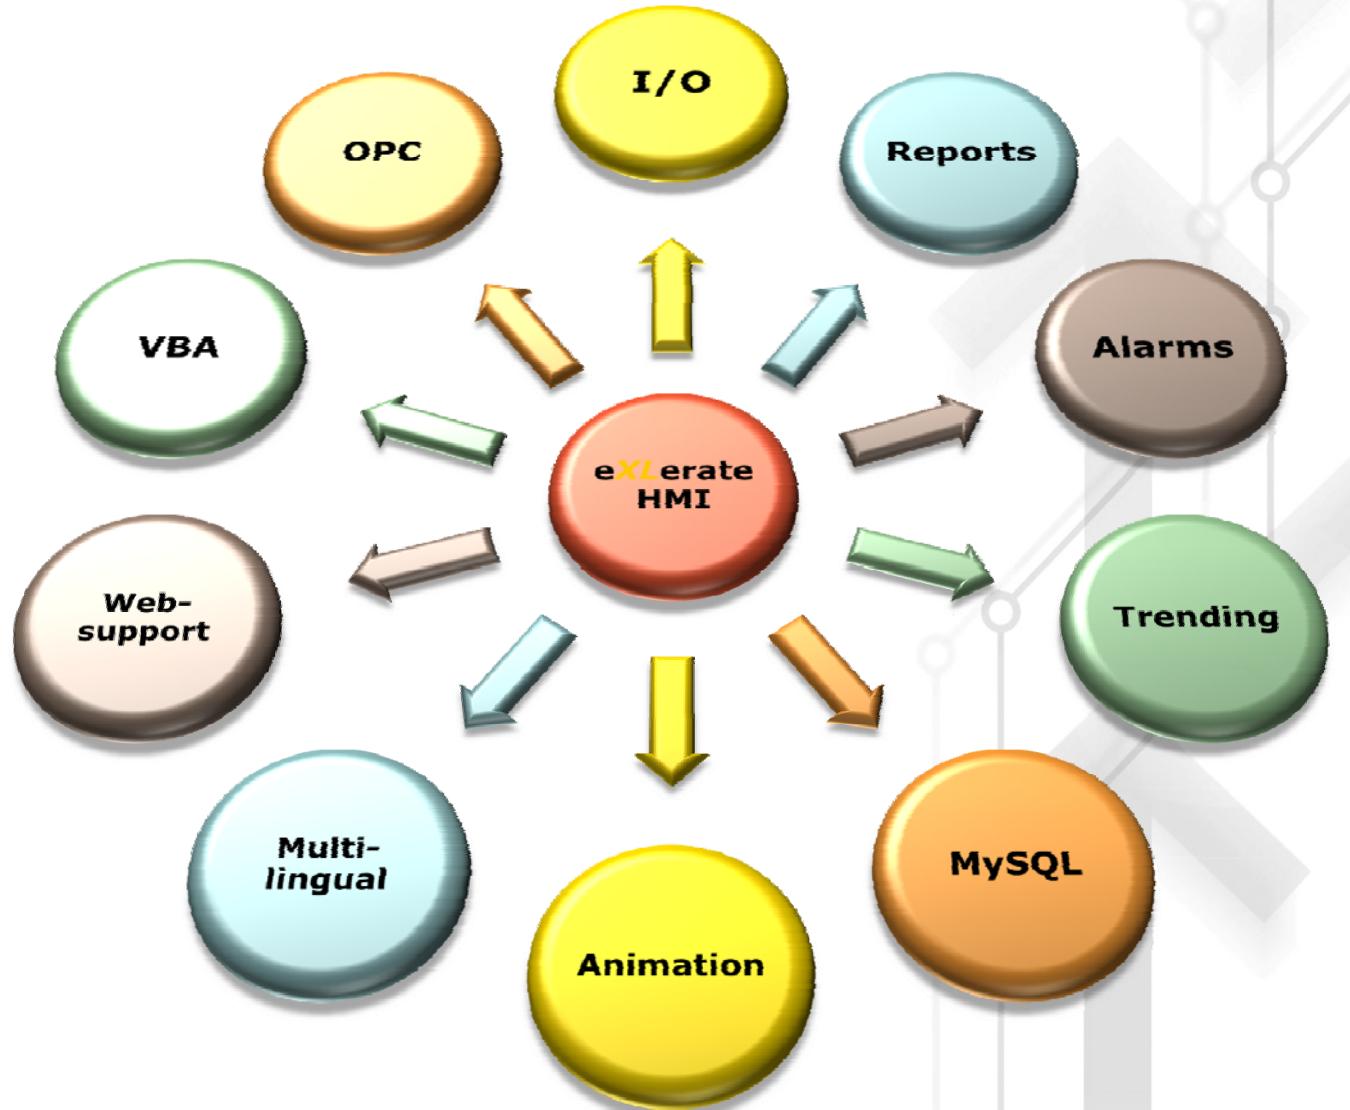

Spirit IT, Inc., USA

Market segments oil & gas

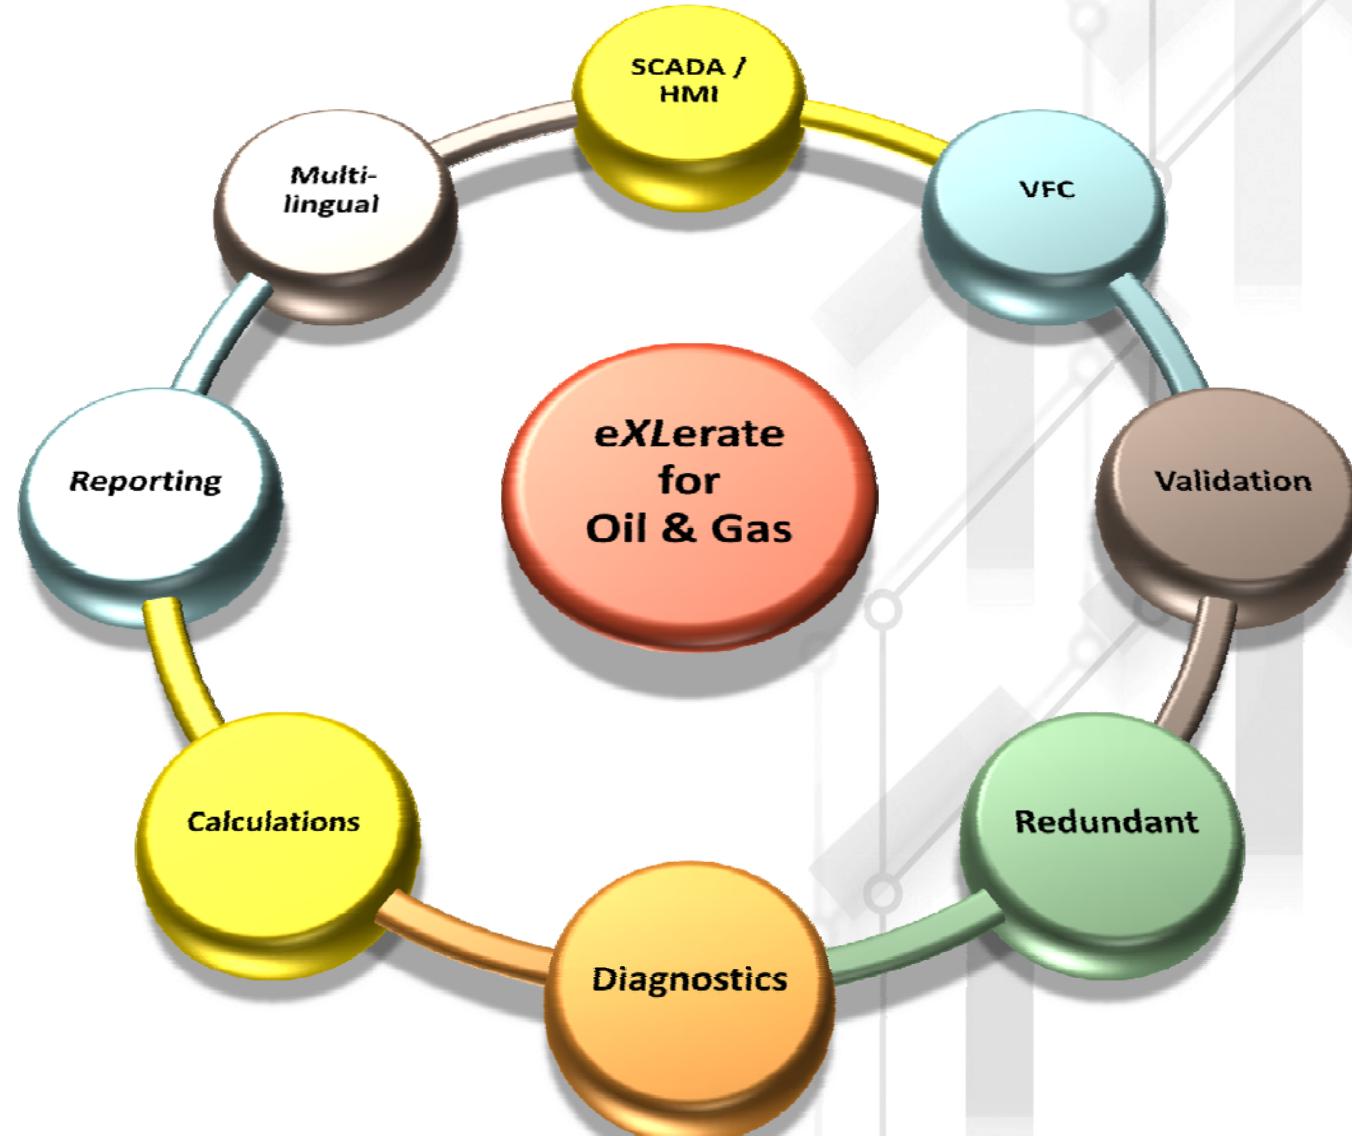

eXLerate®

Visualization & Control functions

Functionality needed for oil & gas

The usual approach

- **Standard SCADA/HMI packages:**

- Citect, InTouch, iFix, Cimplicity, Wizcon, ...

- **... is general purpose software...**

- **... frequently used, but not made for oil & gas**

- Metering = Computational for Financial purposes. NOT a control system!
 - Introducing complex solutions with many special challenges
 - Where is the technical support when you have a problem ?

- **Challenges for oil & gas:**

- Obtain a maintainable & yet flexible & powerful software environment
 - Synchronized redundancy on clients + servers
 - Integrated HMI, combined with full fiscal reporting
 - Embedded flow equations, time series, weighted averages...
 - High precision 64-bit calculation accuracy
 - Real-time embedded diagnostics & performance monitoring
 - Integrated validation & calibration facilities for instrumentation
 - Multi-lingual interface
 - Etc.etc.

Our solution makes the difference!

eXLerate is ...

- ➔ Especially developed for the oil & gas market
- ➔ A stable and mature product, used in many large control systems

A simple solution for a demanding industry

- ➔ Popular interface integrated/combined with all SCADA/HMI functions
- ➔ Powerful & flexible, and yet simple toolbox
- ➔ Only 1 developer required - even for complex projects

HMI/SCADA with advanced oil & gas functions & knowledge

- ➔ High precision embedded gas and liquid flow calculations
- ➔ Super report generator, trending, alarming etc.
- ➔ Validation procedures 100% integratable with SCADA/HMI

Supporting many architectures

- ➔ from...laptop to... redundant client-/server systems

A product with a rapidly growing install base

- ➔ Many (>300 aug 08) installed systems, running 24/7

A product in front of a great support team

- ➔ Your problem is OUR problem and we solve it!
- ➔ From starters training sessions to expert level project knowledge

Example: Tanker Loading system, Persian Gulf

Fiscal Metering with TAS

Saudi Aramco, Ju'aymah Gas Plant

Project systems description

- Compliant with Saudi Aramco specifications **SAES-Y-102** and **SAES-Y-103** for Royalty Metering of Hydrocarbon Liquids
- Sea Island Ship Loading System +
- product Feed & Surge system

System Hardware

- 46 Multistream Flow computers
- 140 liquid flow meters & proving
- Redundant PLC system
- 2 Client-/Server systems with 8 PC's
- Fully dual redundant

Software functions

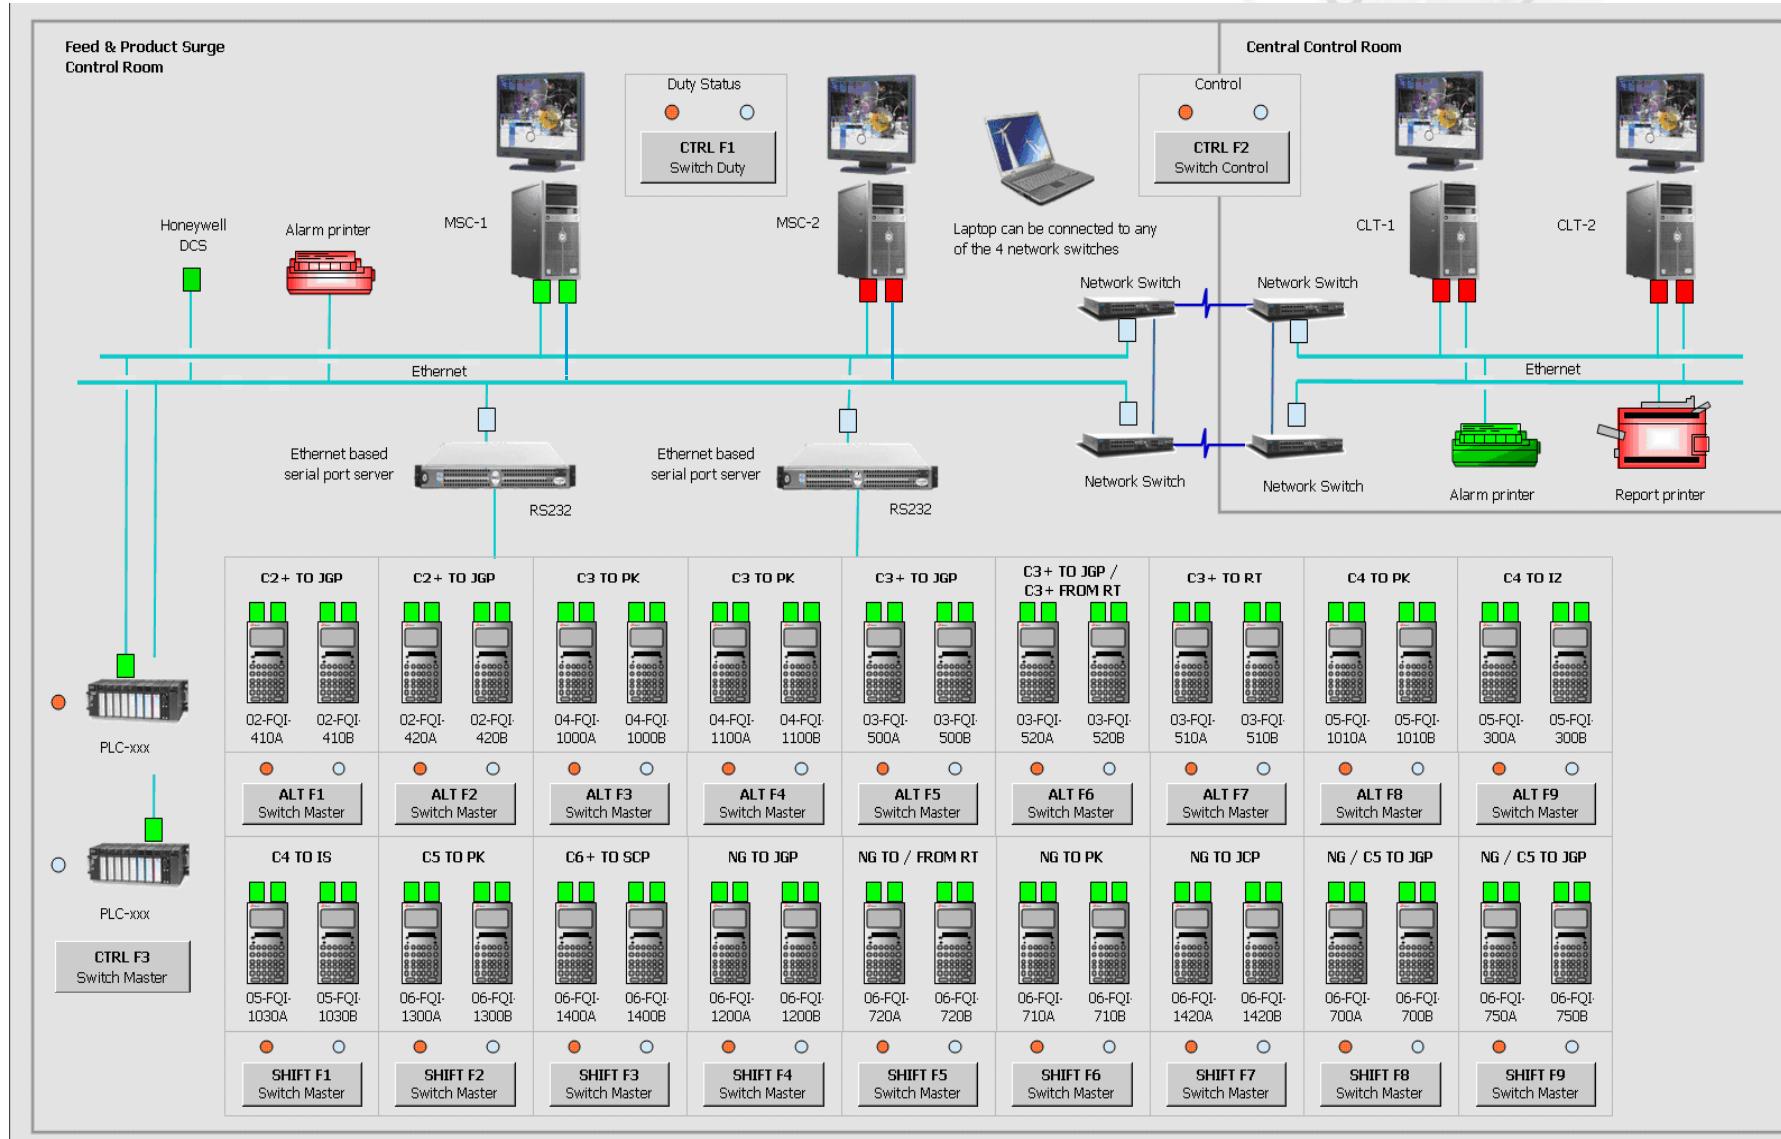

- Redundant SCADA
- Fiscal Metering
- Terminal Automation
- 24/7 Continuous Operation & Control
- Proving (16" & 36" ball provers)
- Reporting

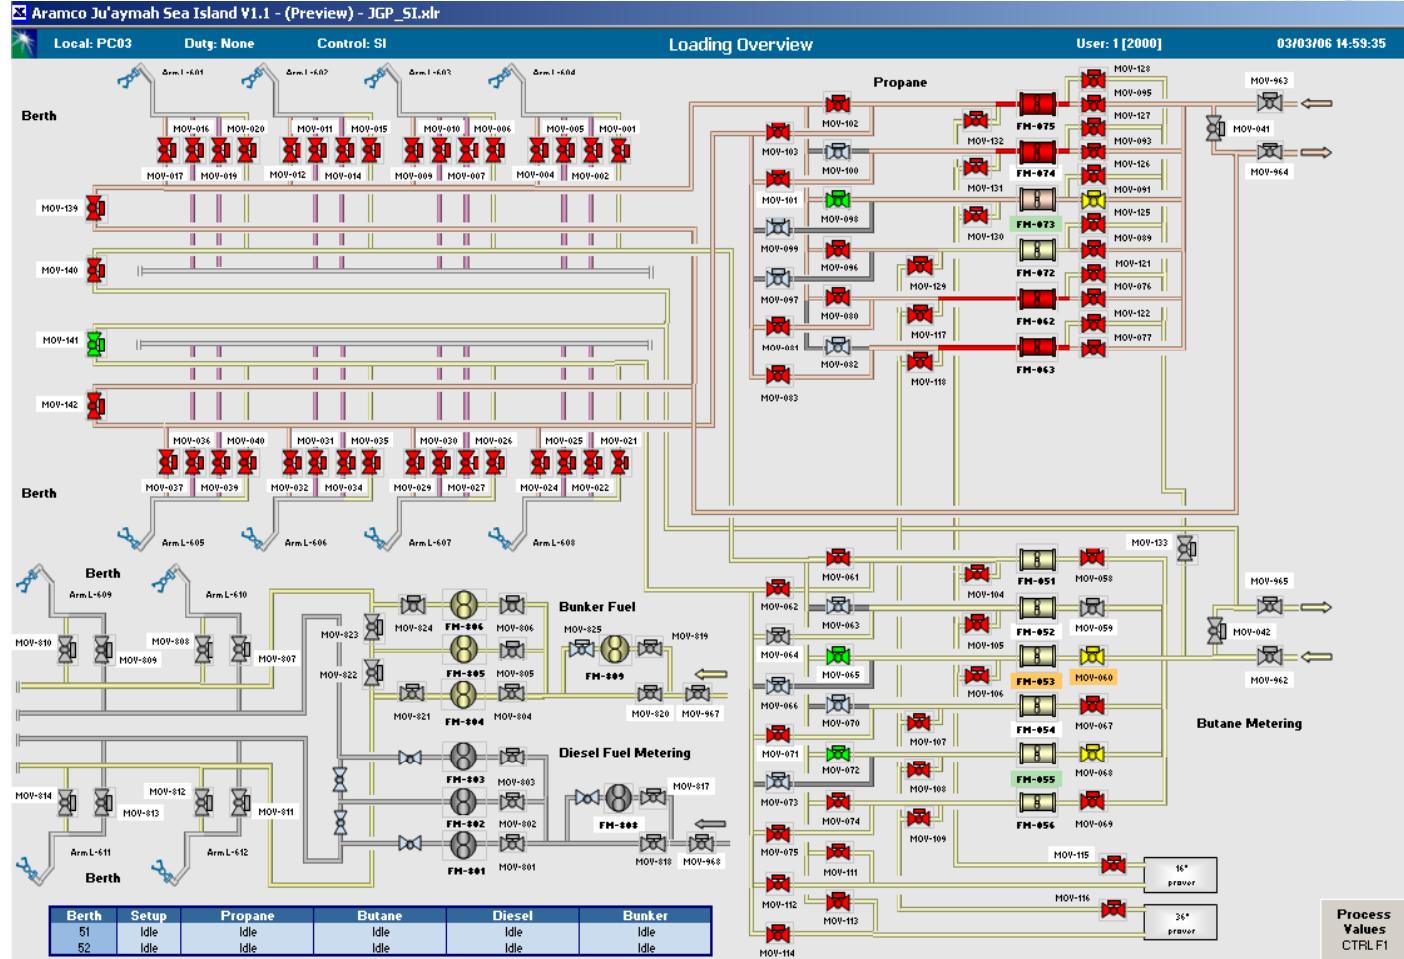

Quality in System Integration

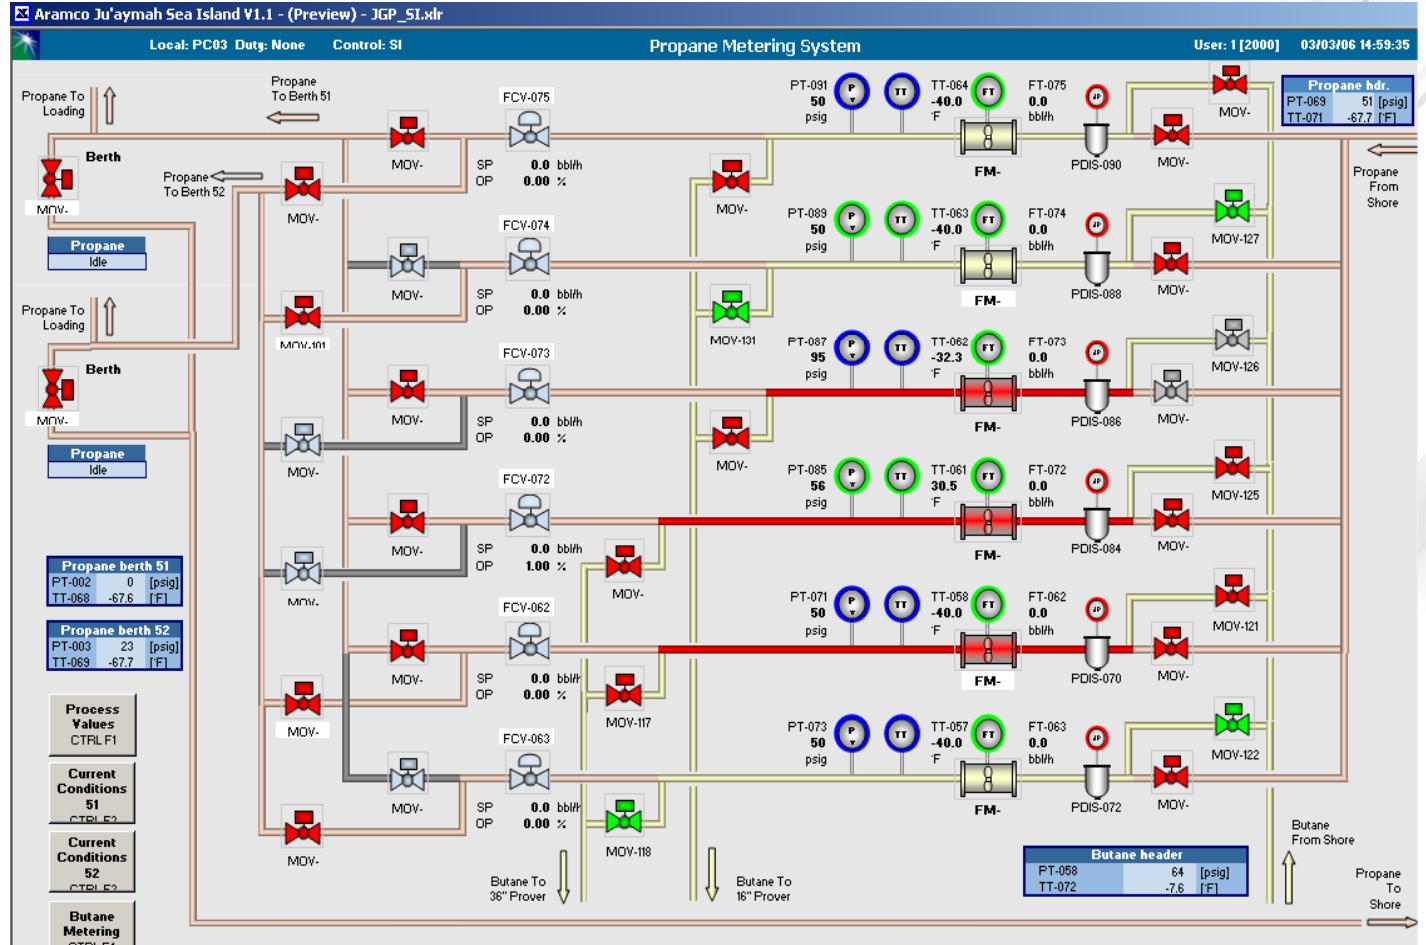

System architecture

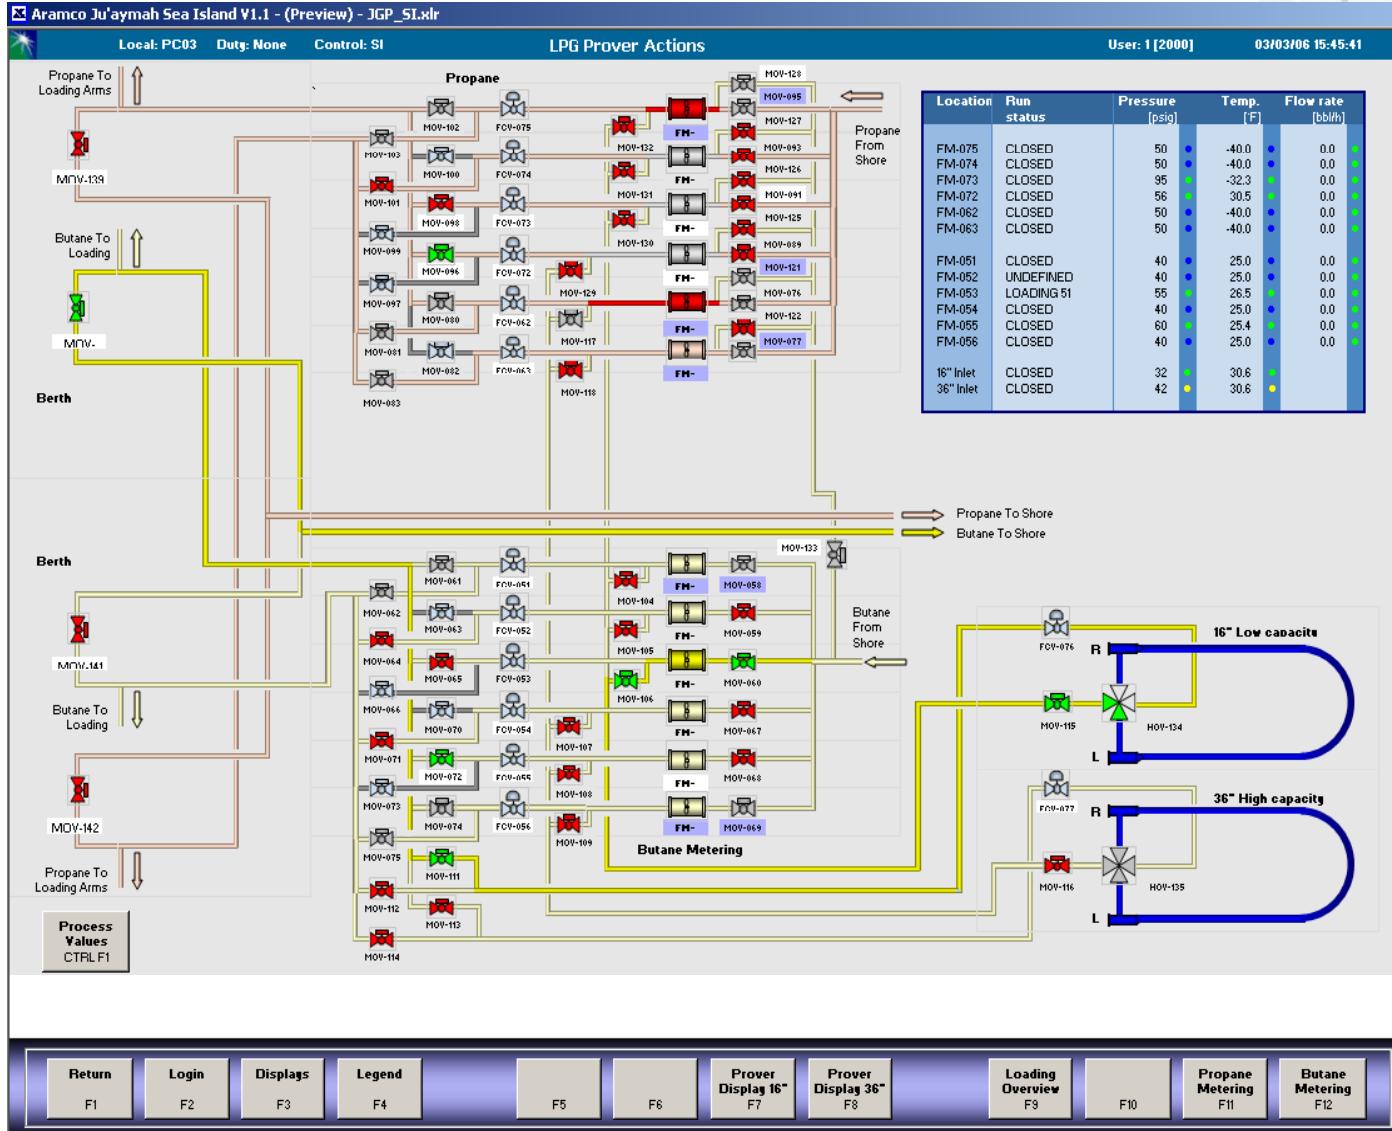

Automated loading

Metering – Propane/Butane/Fuel

Integrated Meter Proving - LPG

Comprehensive Reporting

eXLerate 2003

Advantages for the developer

- Superb support from Spirit IT
- Well-known development environment
- Simple, very Flexible & extremely Powerful
- Runs on simple laptop & large client-/server systems
- Open Architecture
- Highly re-usable library of applications/sections/objects
- Conclusion: **Low cost on development work**

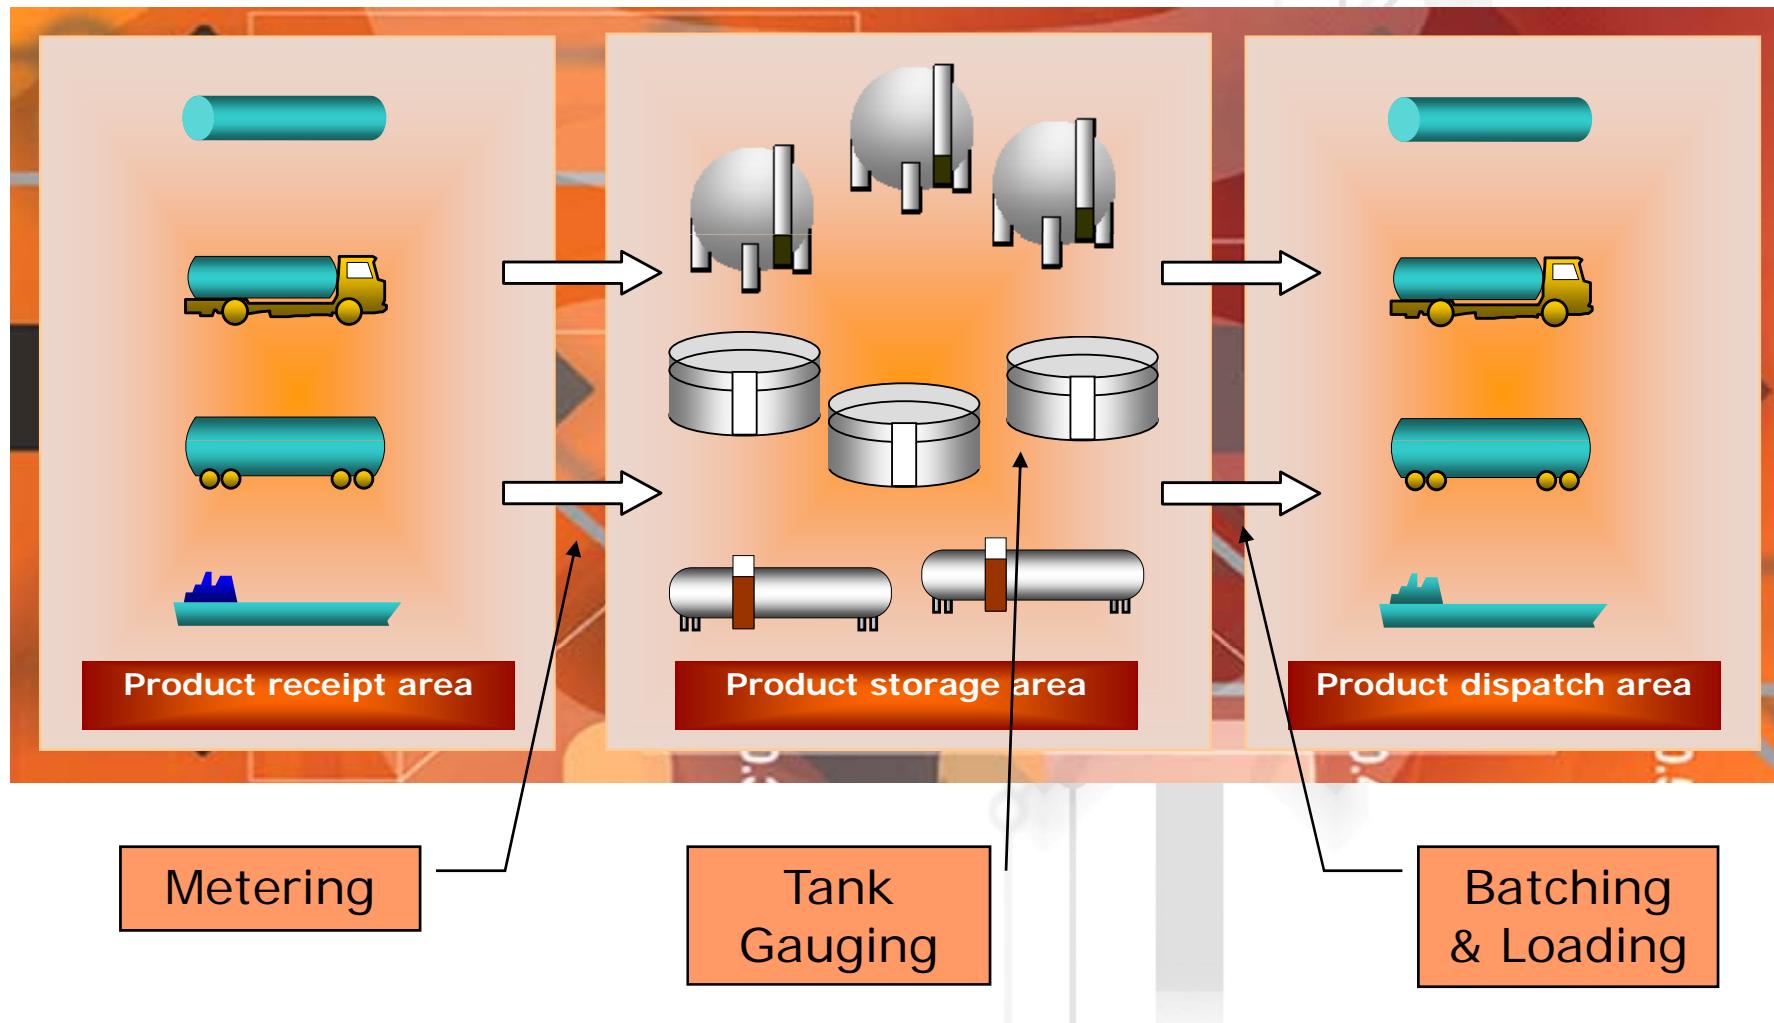

Advantages for the end-user

- Proven working solution for your project
- Suitable for a wide range of applications, from small to large
- Maintenance, extensions, modifications etc. in Excel
- Open Architecture
- Conclusion: **Low Cost Of Operation**

Terminal Automation Solutions

Horizontal Integration

Terminal Automation applications

Installed systems:

- Ship loading
- Truck loading
- Railcar loading
- Tank farm management

eXLerate® based solutions

- + Allows you to integrate all equipment
- + SCADA/HMI integrated
- + Product based tank inventory
- + Fiscal flow metering
- + Valve control
- + Fully automated product loading
- + Document generation & storage
- + Database support available in a tailor-made solution
- + Independent of hardware suppliers.

Product loading

Loading order management

- ⌚ Scheduled orders, direct orders
- ⌚ Compartment based loading orders
- ⌚ Aggregate loading orders
- ⌚ Interface with host (ERP) system
- ⌚ Multiple loading stations, multiple compartments
- ⌚ Loading sequences

Vehicle management

- ⌚ Vehicles, forwarding agencies
- ⌚ Railcar, truck, trailer
- ⌚ Access to facilities
- ⌚ Authorization

Control of field devices

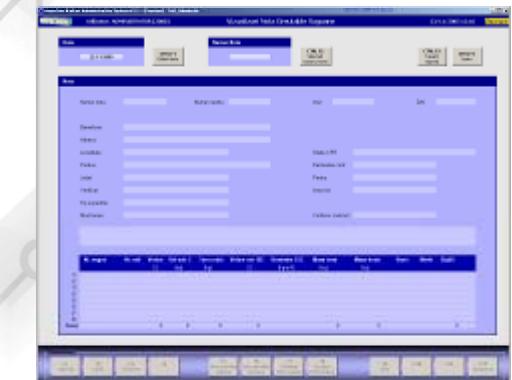

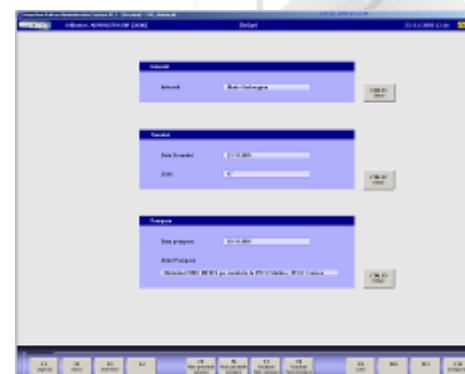

- ⌚ Loading field information
- ⌚ Product data to devices
- ⌚ Storage of audit trails
- ⌚ Meter proving

Product receipt & dispatch

Product receipt & dispatch

- ⌚ Batch scheduling
- ⌚ Batch controlling
- ⌚ Flow metering
- ⌚ Meter proving
- ⌚ Custody transfer reporting
- ⌚ Audit trail for Weights & Measures
- ⌚ Vehicle loading scheduling and controlling
- ⌚ Loading order processing and management
- ⌚ Bill of lading & delivery documents
- ⌚ Vehicle and driver entry validations
- ⌚ Managing Identification Systems
- ⌚ Managing vehicle weighing systems

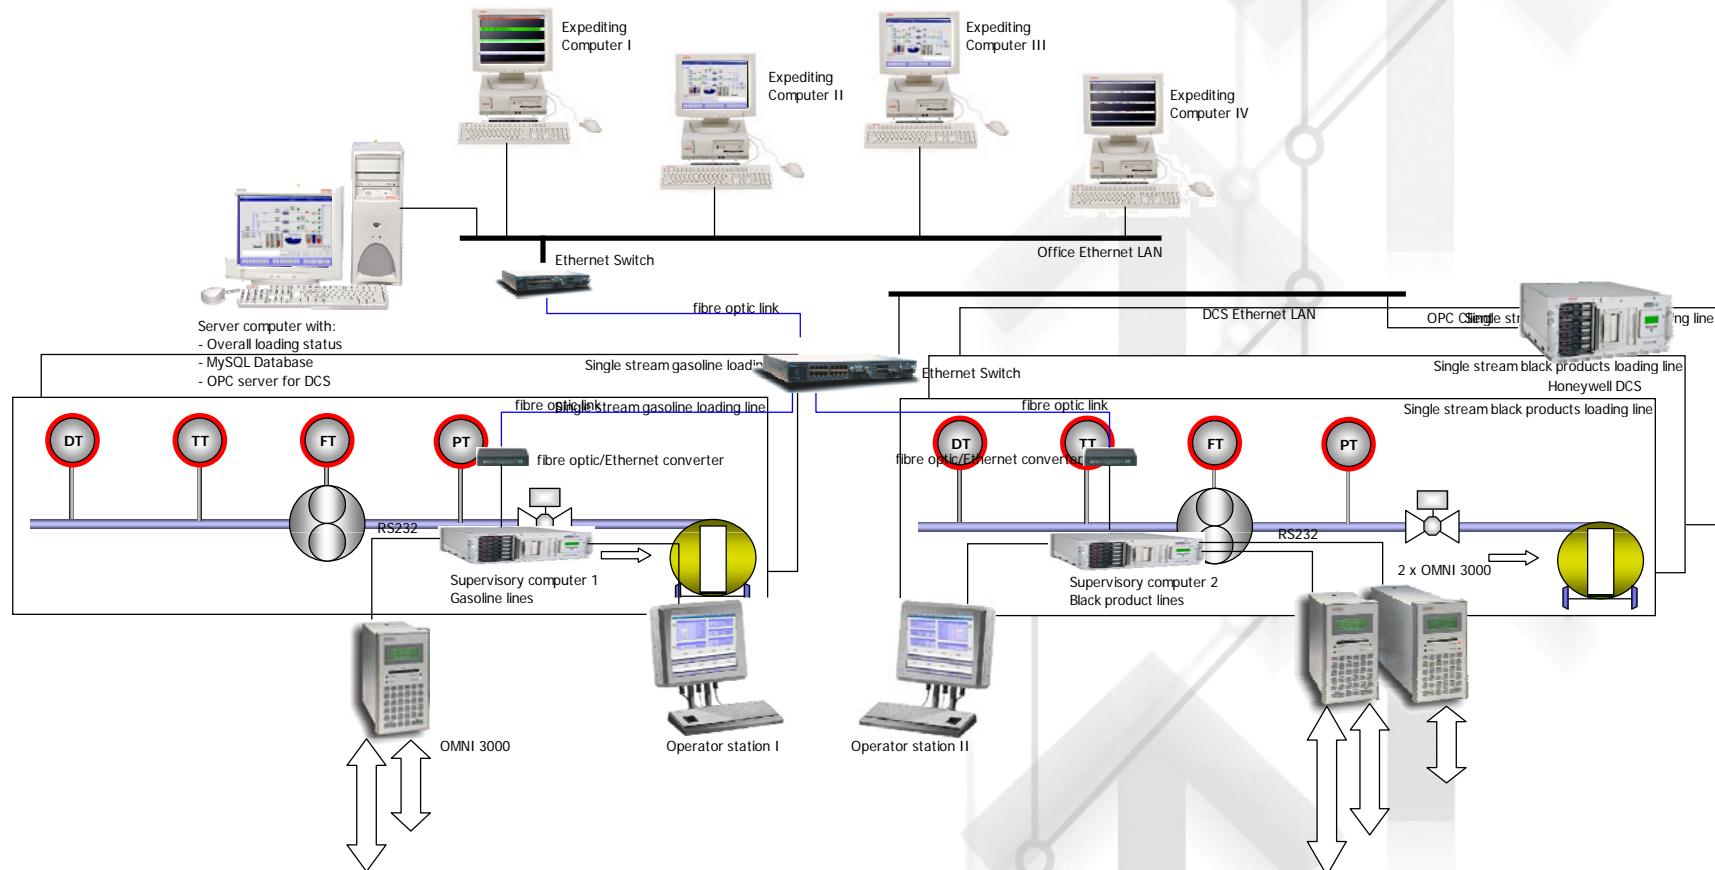

Railcar loading system example

Railcar loading system architecture

Spirit it
Innovative Technologies

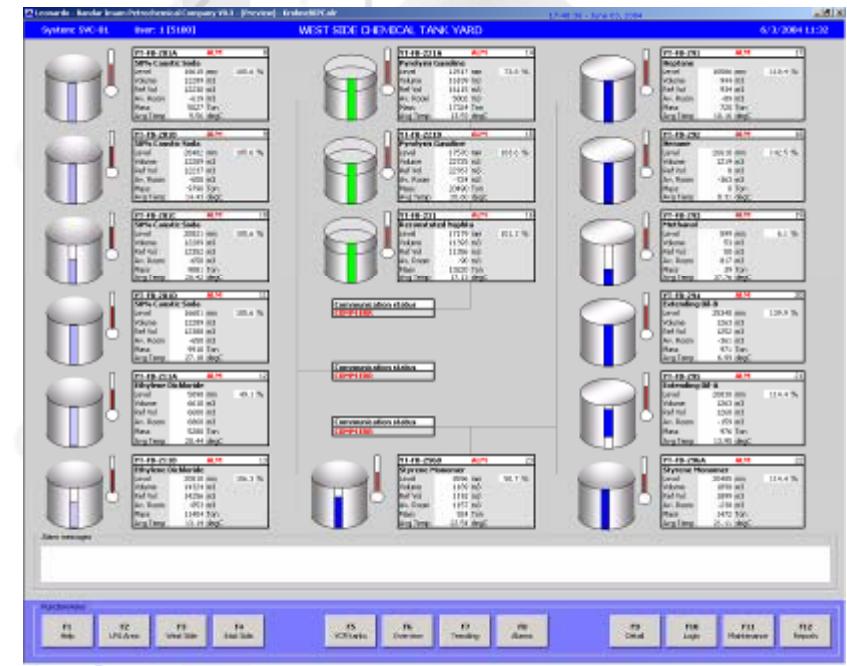

Tank farm management

Hardware independent

- Integration of tank gauging equipment of various vendors through versatile communication drivers

Tank shape, volume corrections & density calculations etc. built in

Combine SCADA with metering & tank gauging in one platform

Tank inventory functionality

Volume corrections

- API 2540 (ASTM)
- TP-25 (LPG)
- Others
- Strapping tables

Tank shape corrections

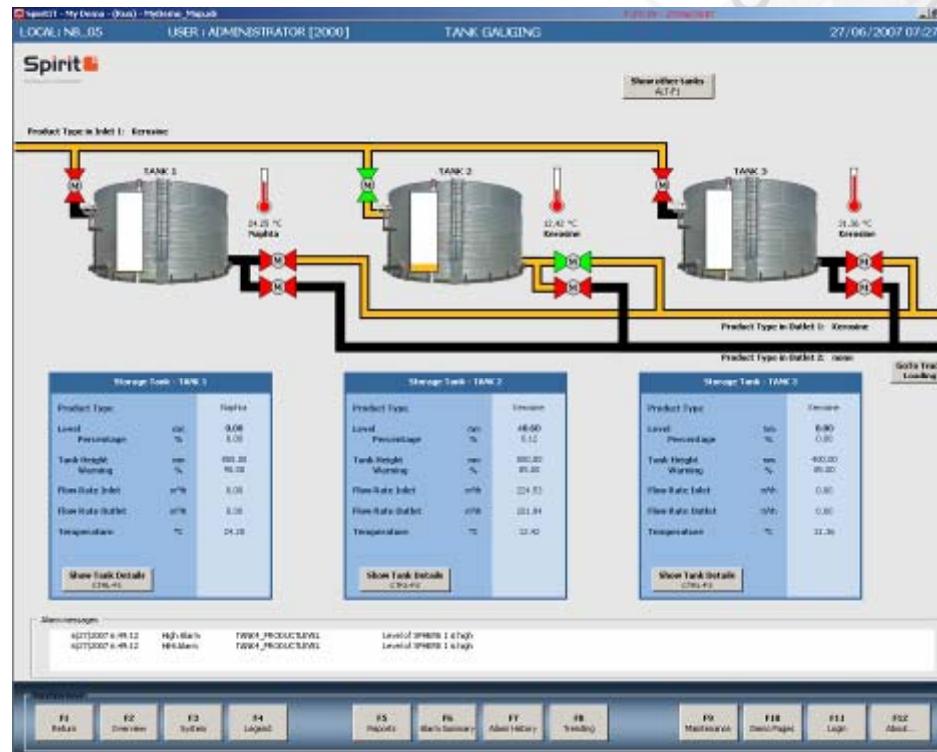

- Spherical
- Dome
- Floating roof
- Conical

Integrated reporting

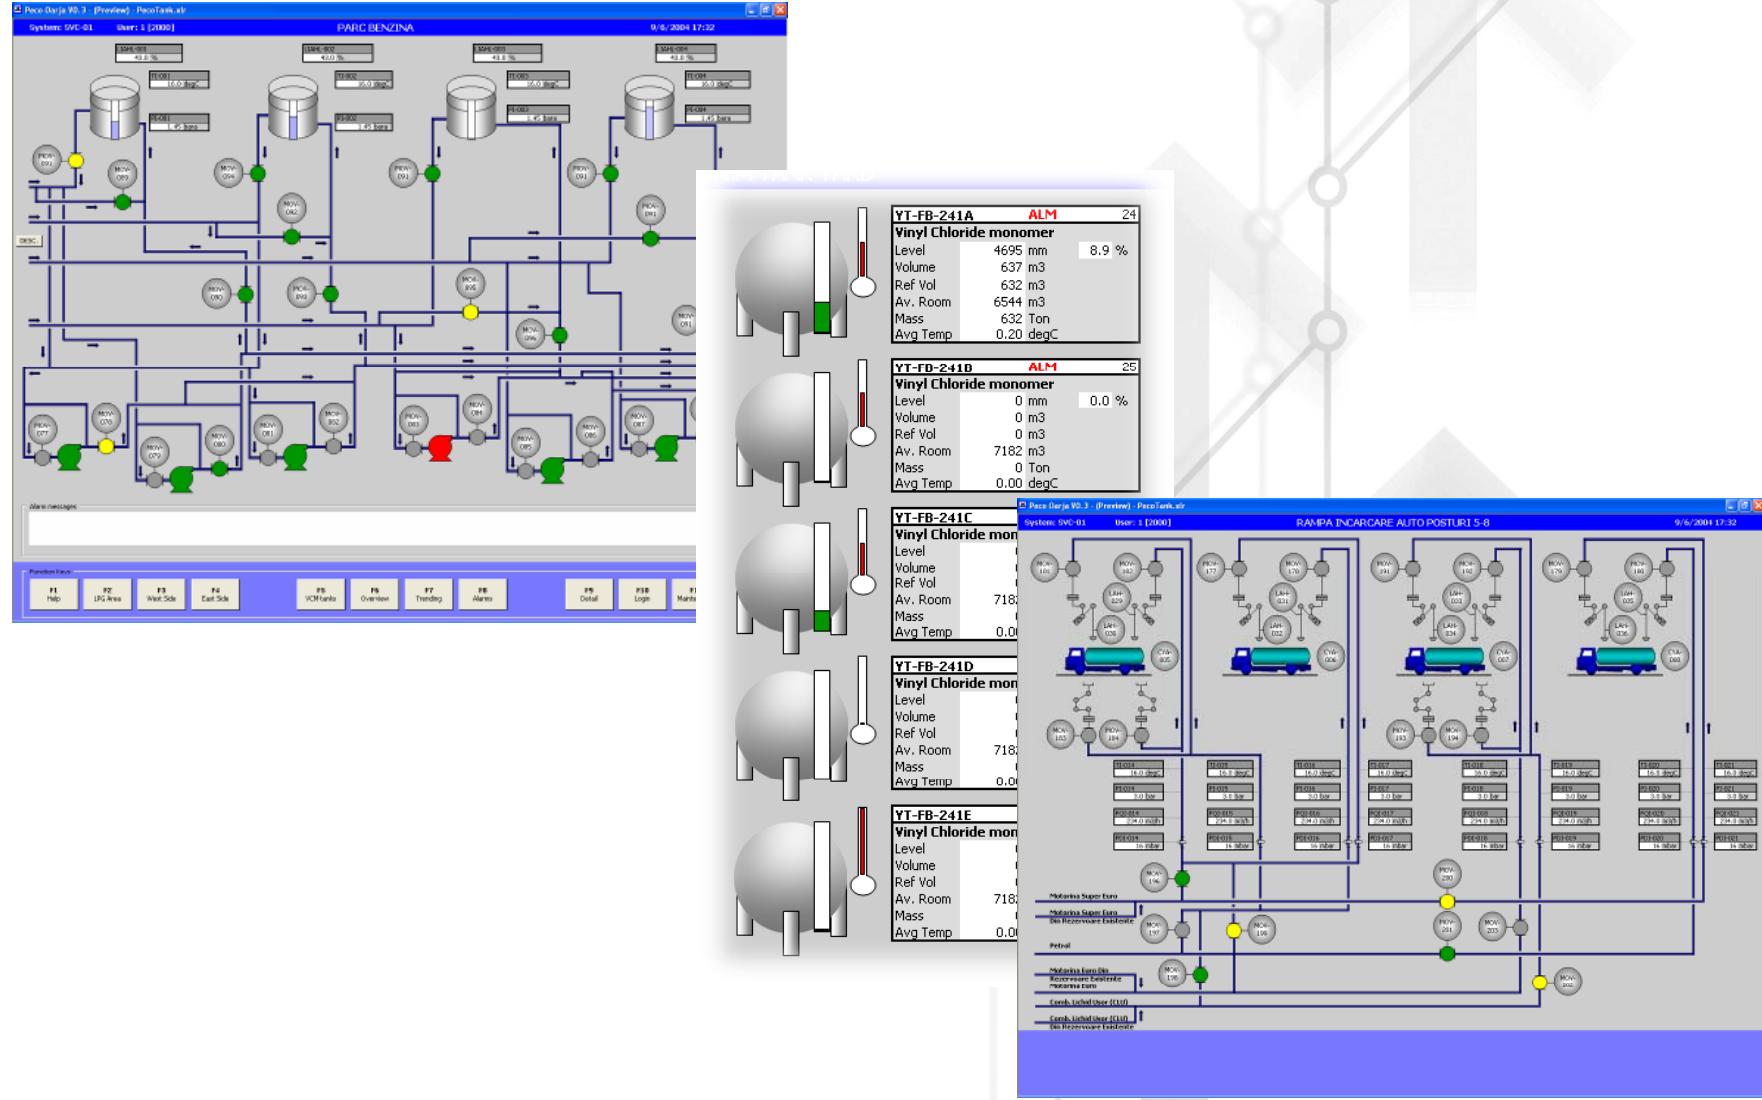

- Shift reports
- Daily reports
- Monthly reports

Graphical tank displays

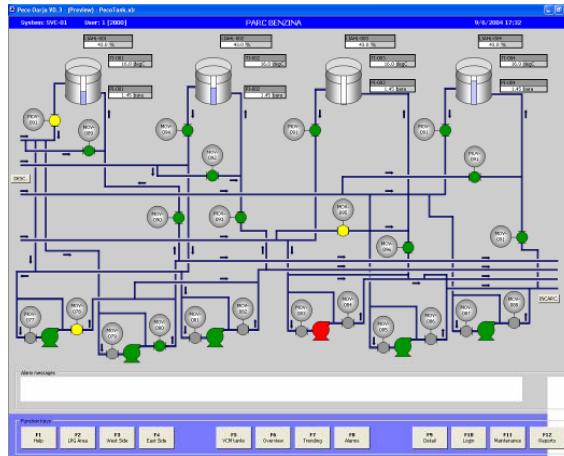

- Tank farm overview
- Tank group display
- Tank detail display
- Tank maintenance

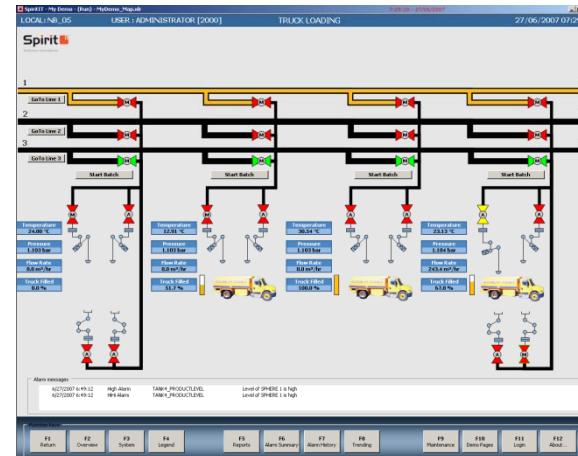

Integrated tank farm operation

Tank farm – volume balancing

+

=

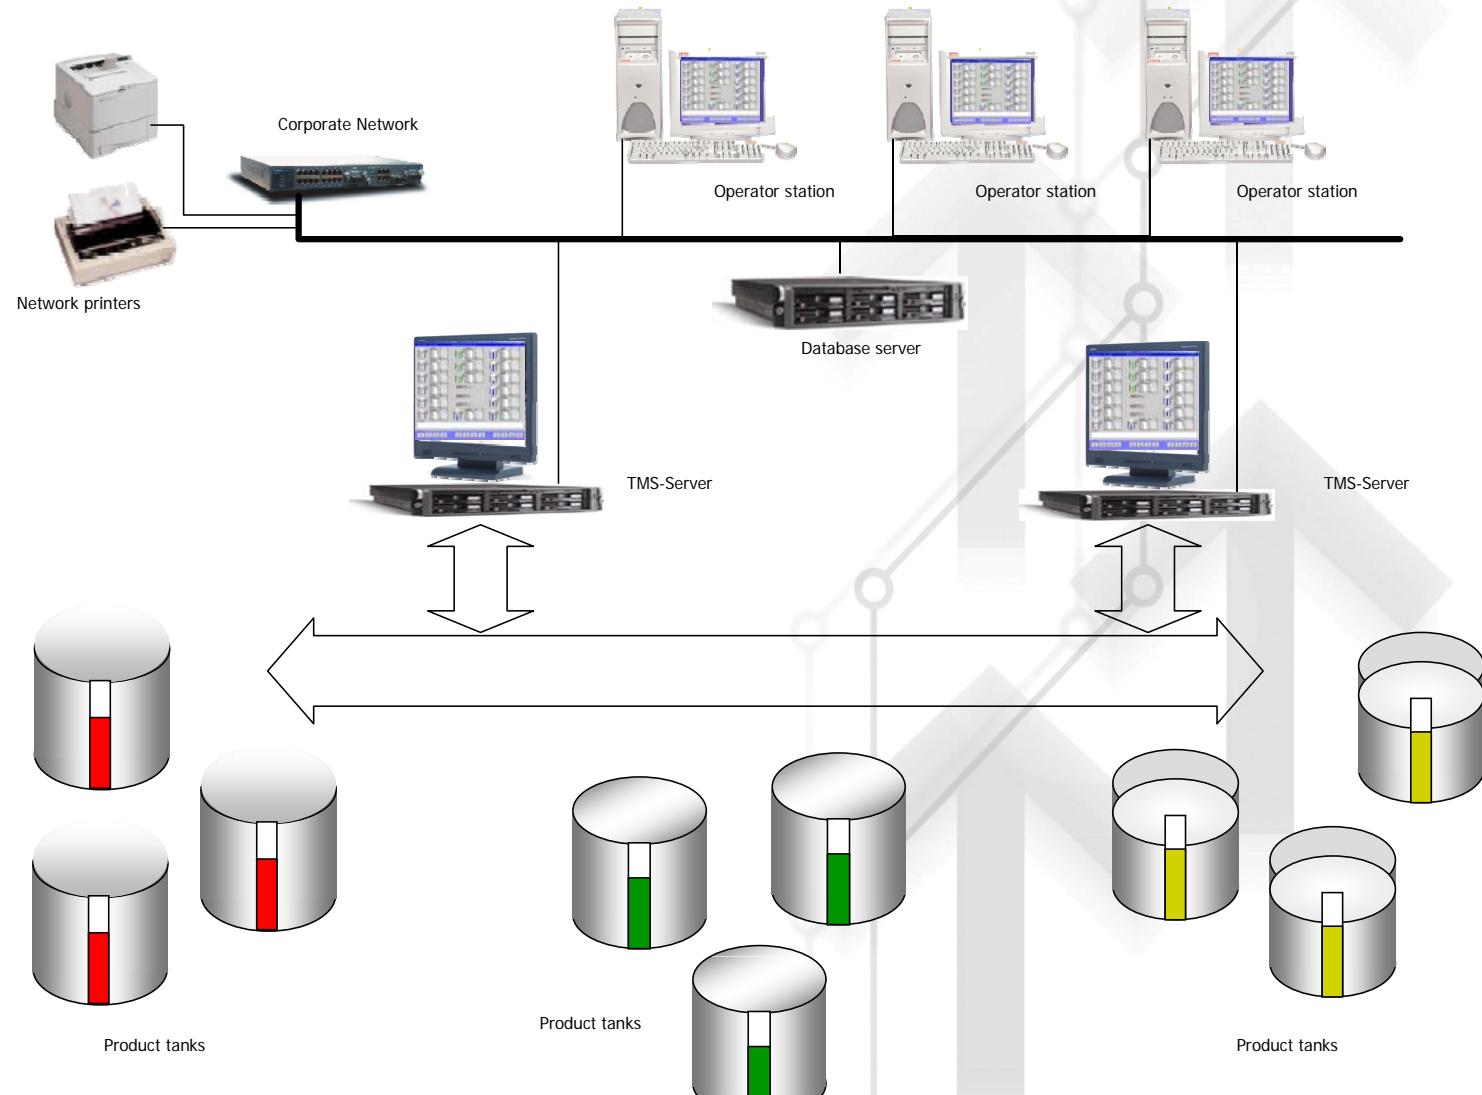

Compare Metering data with Tank data

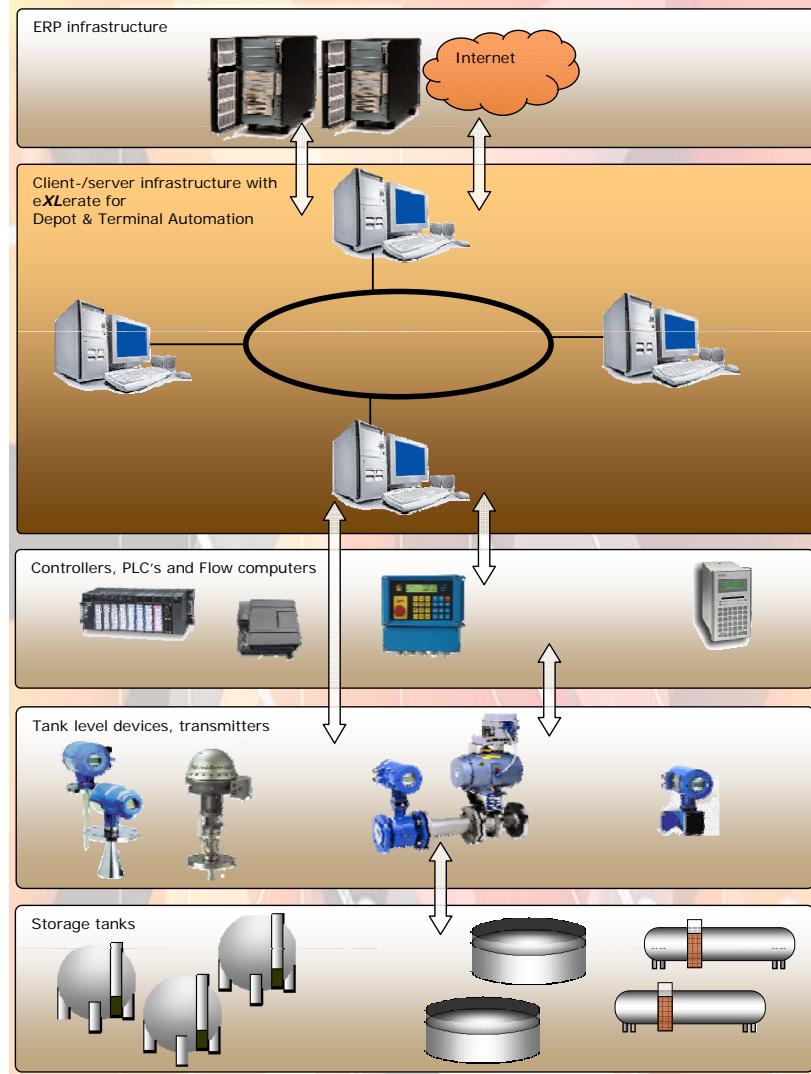

Minimize product give-away

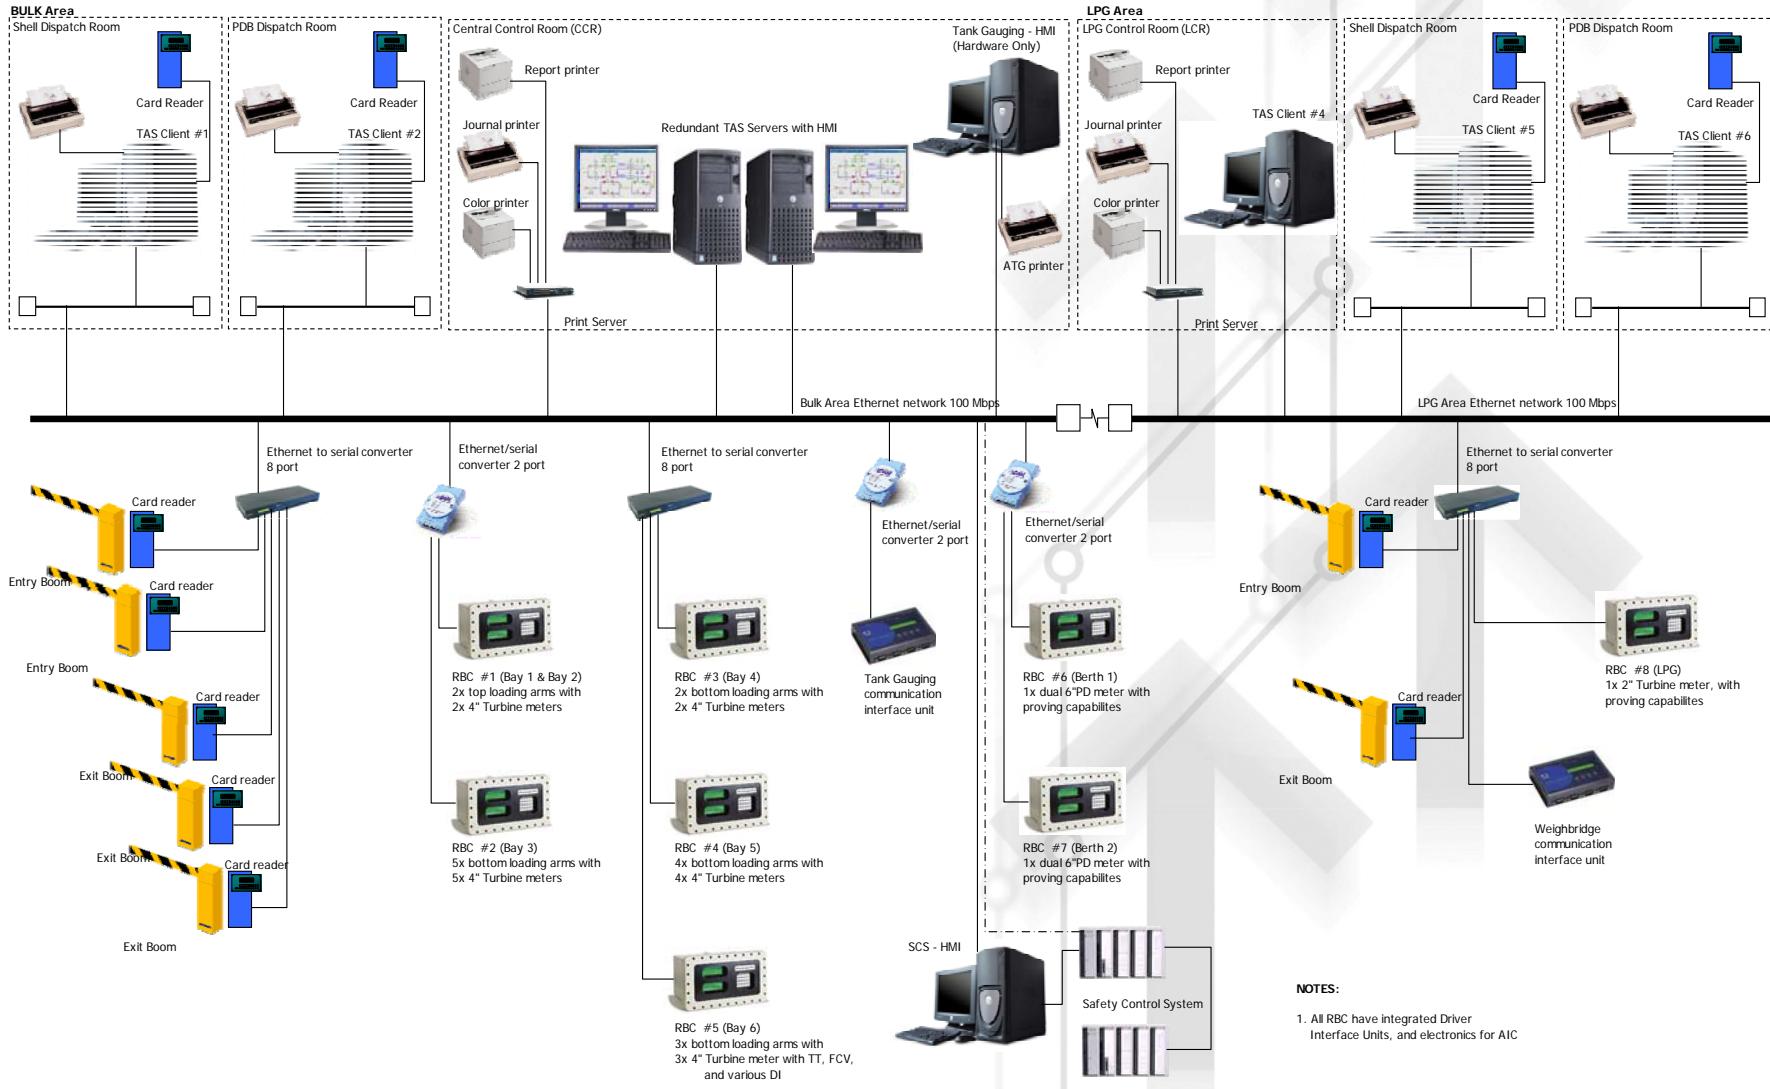

Tank farm management systems

Vertical integration

Advanced system architectures

Gas Metering

Virtual Flow Computer calculations

- Period totalizers, high precision (64-bits)
- ISO-5167, ISO-6976, ISO-12213
- AGA-3, AGA-5, AGA-NX19, AGA-8, AGA-10
- Precision counters, accumulative totals, retentive data
- dynamic viscosity, isochoric heat capacity, isobaric heat capacity, isentropic exponent, energy, entropy, enthalpy, many other

Metering

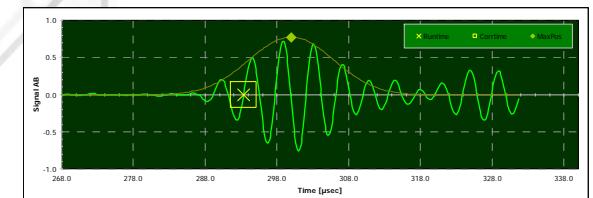

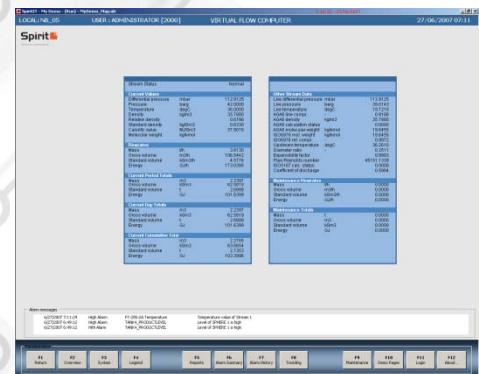

- Time series
- Weighted averages
- Integrated fiscal reporting

Performance monitoring & diagnostics

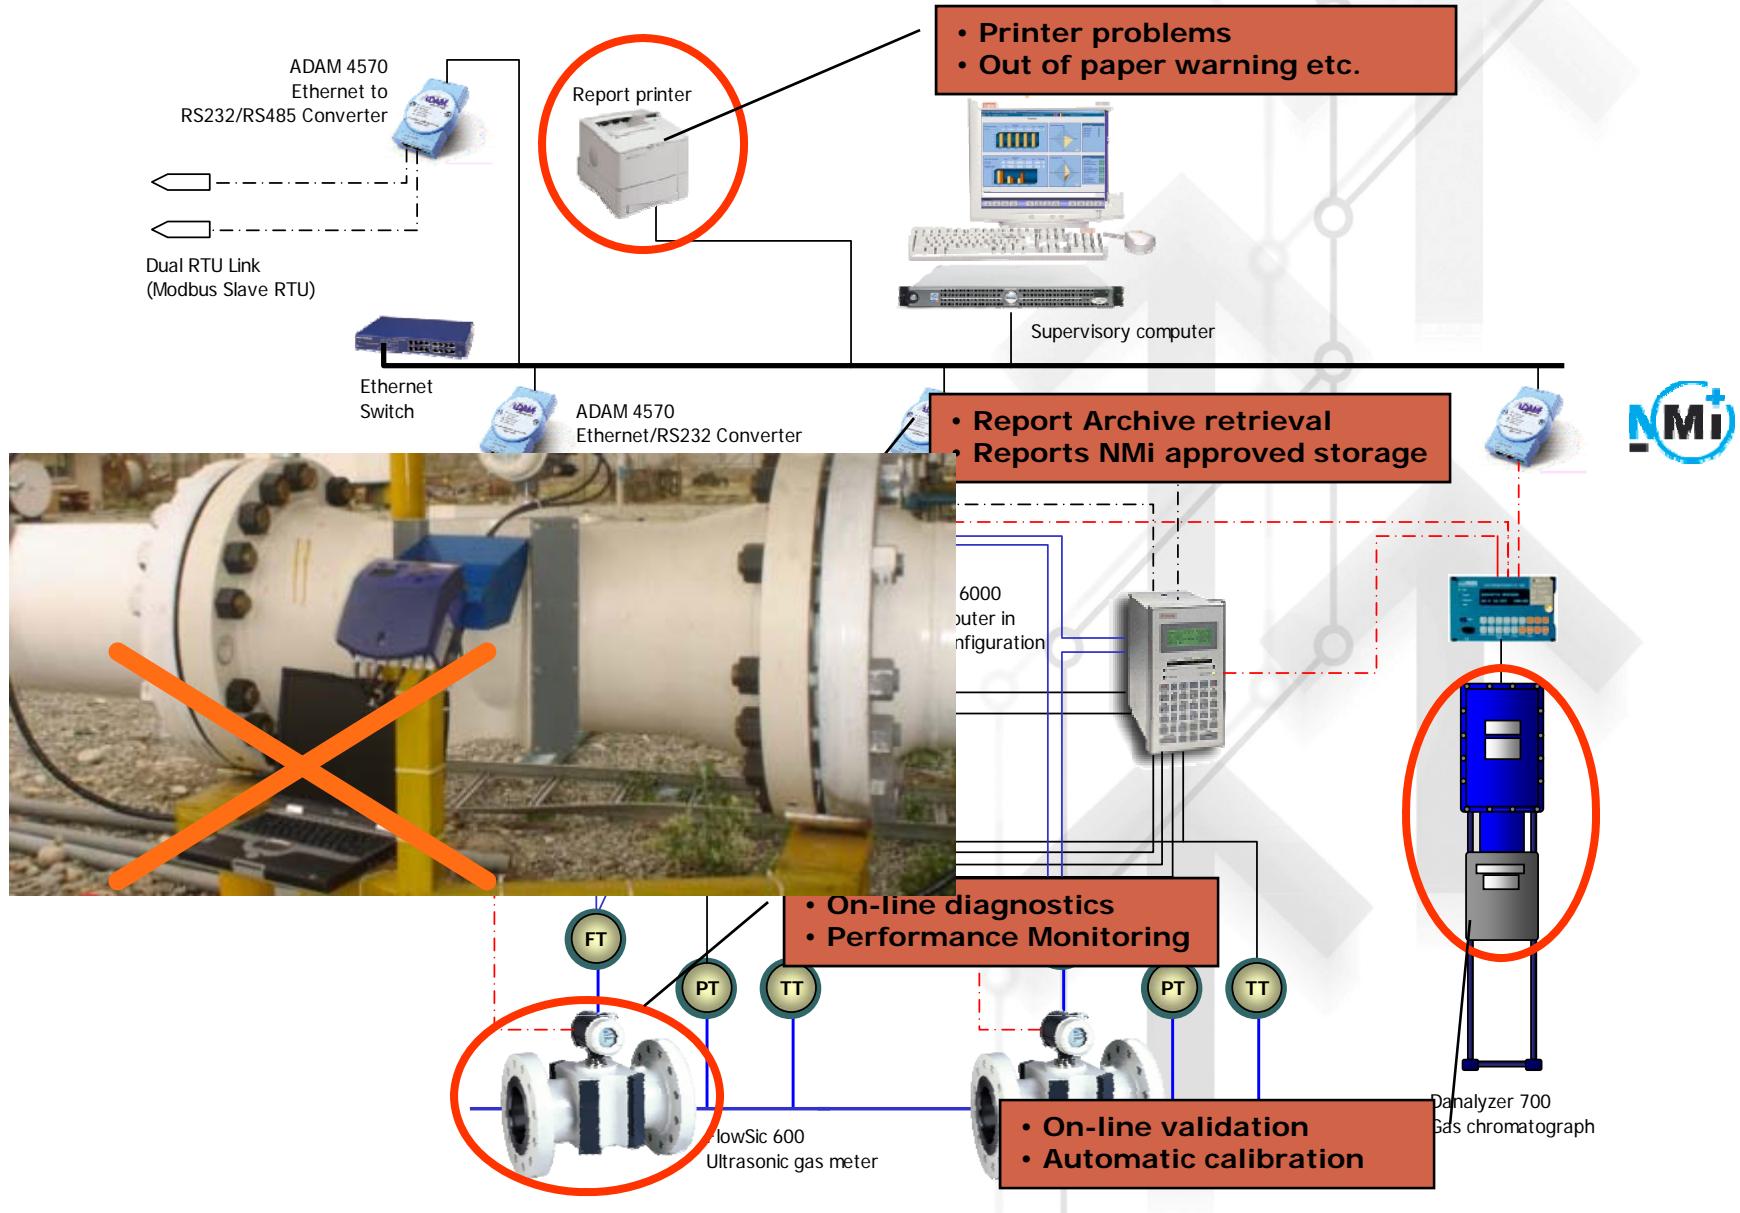

- VOS comparison within 0.1% typically
- Online meter fingerprint verification
- CUSUM-based drift analysis on signals
- Historical trending with advanced trouble-shooting features

On-line Validation & Calibration

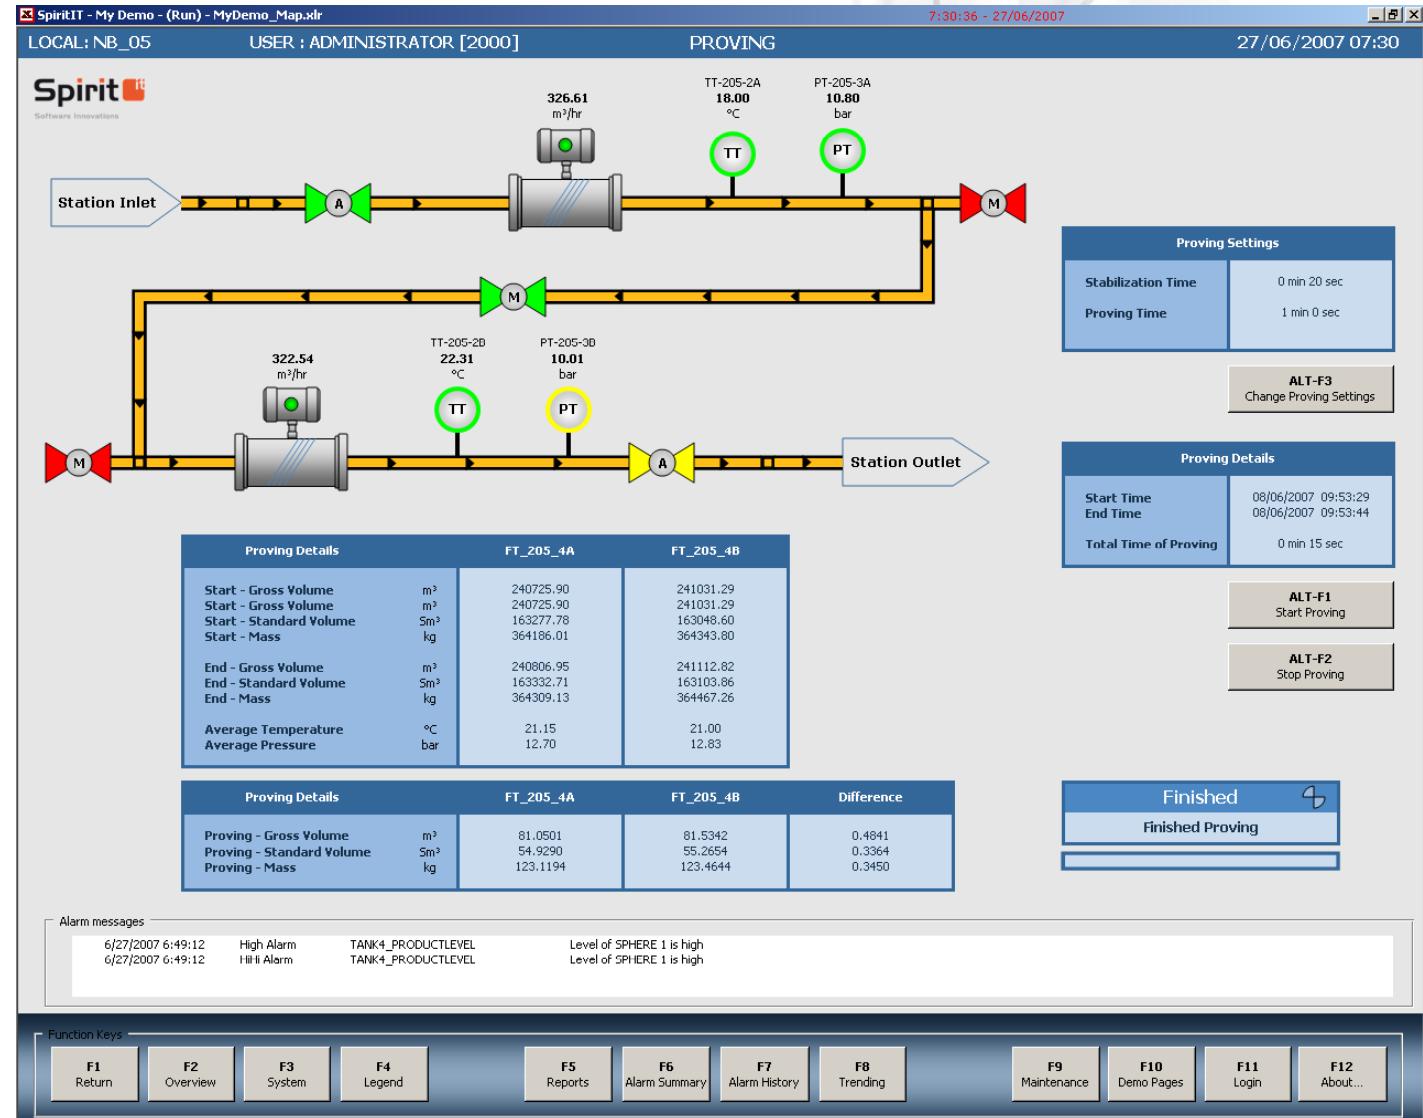

- Temperature & Pressure transmitters
- Density, Relative density analyzers
- Gas chromatographs
- Ultrasonic meters

Performance Monitor & Diagnostics

Master meter proving

USM Performance monitoring

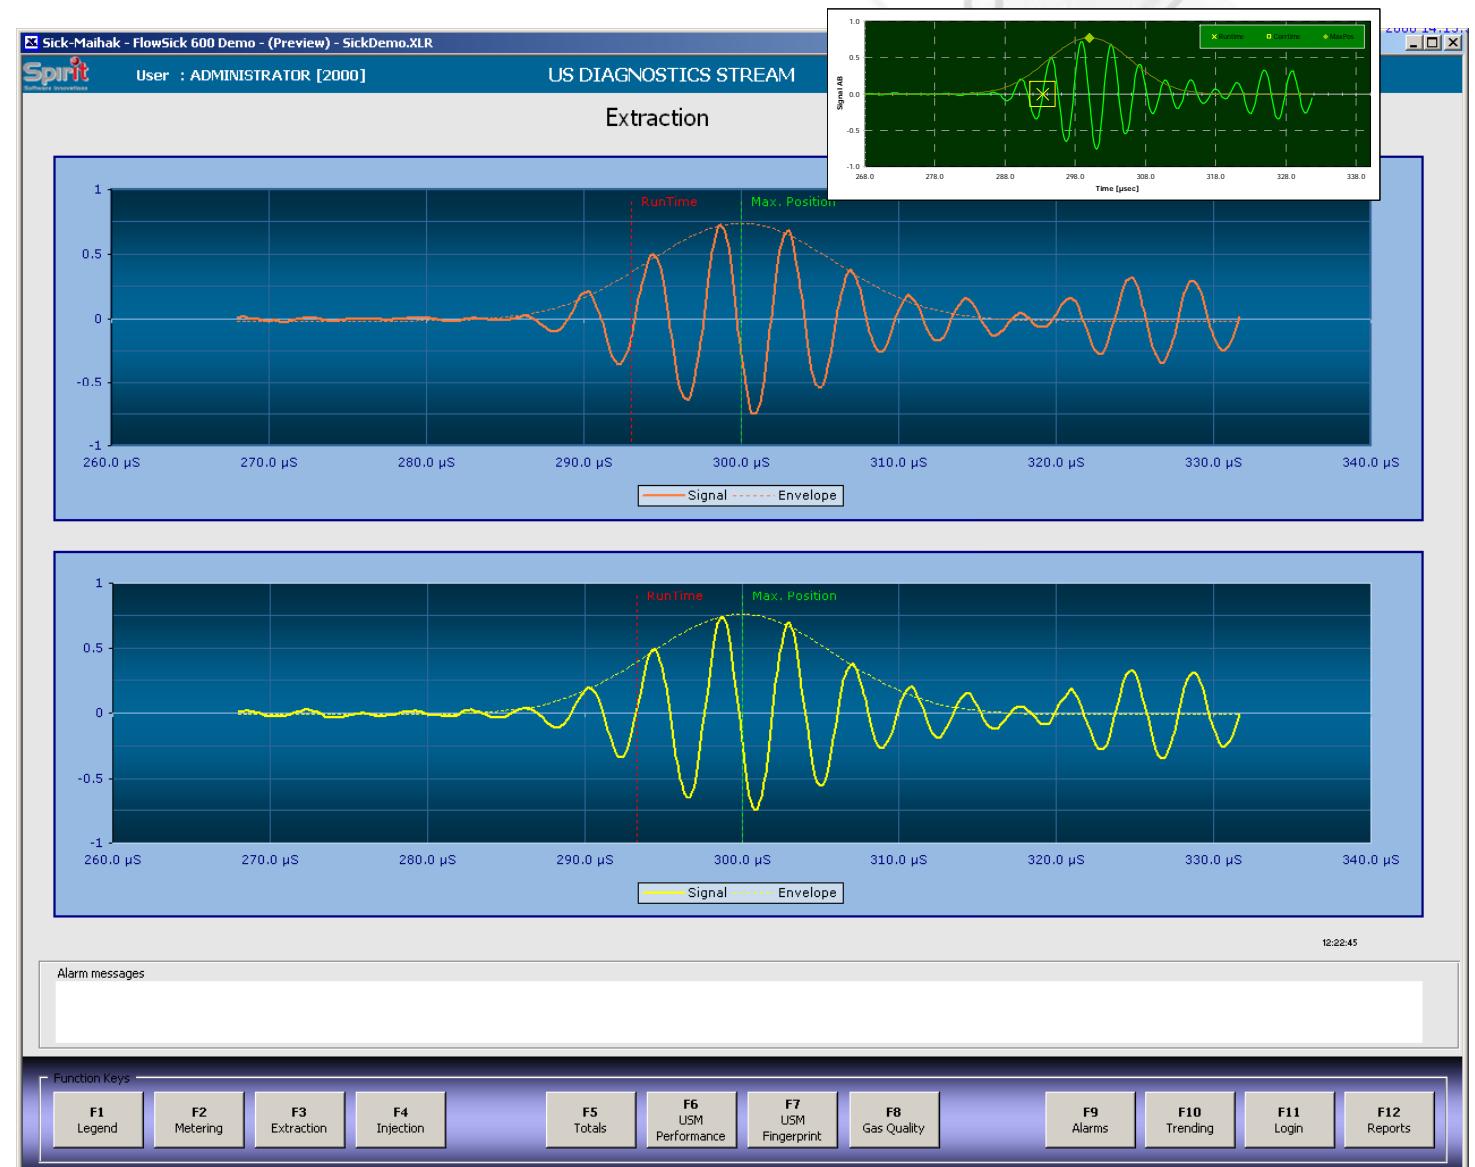

Real-time meter fingerprints

Integrated meter diagnostics

Spiritit
Innovative Technologies

Flow equipment verification

Compressibility

- All used international standards
- Comparison with FC

Speed of Sound

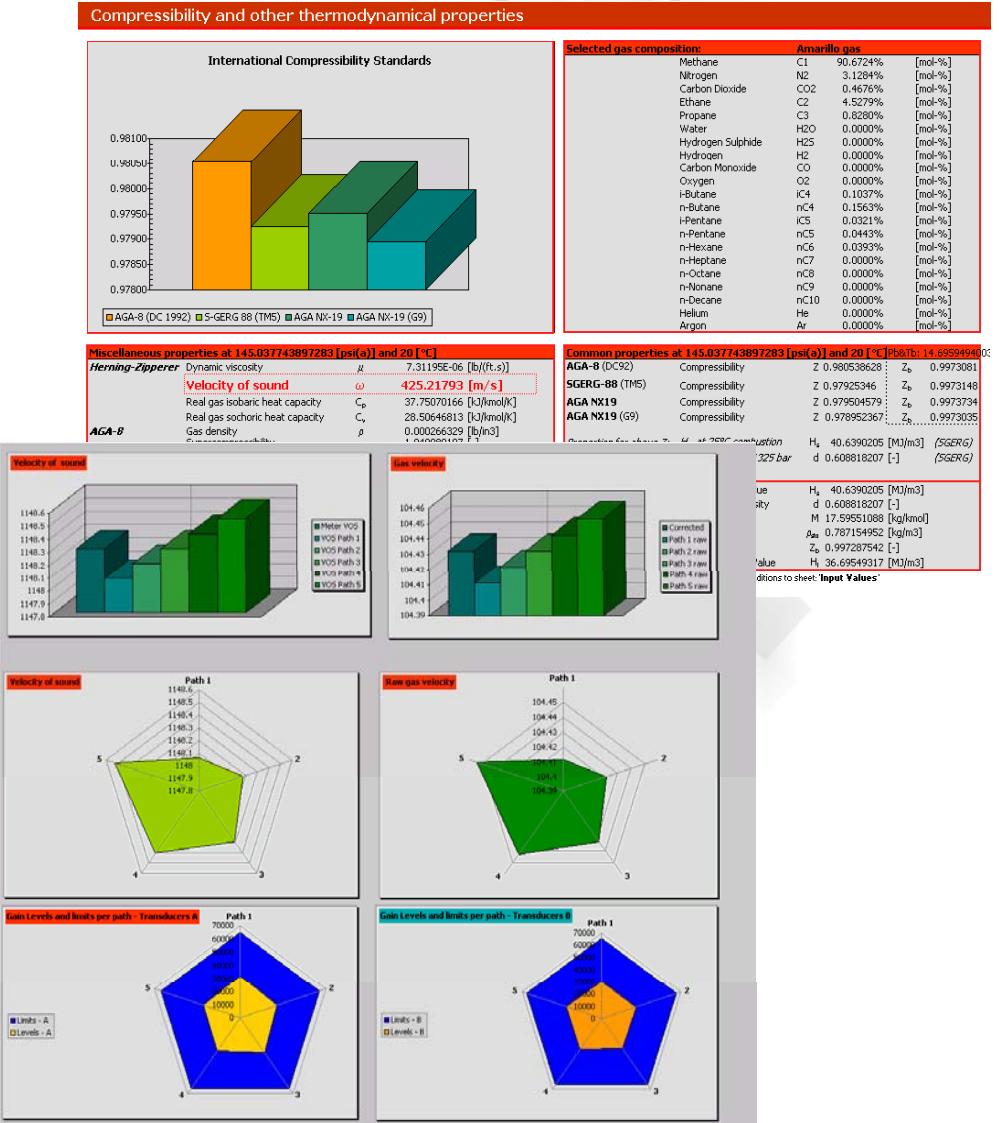

- Advanced methodology
- AGA10

CUSUM

- Drift analysis
- Long-term drift detection

Deviation checks

- Peak detection
- Delayed deviation
- Definable band-with

Flow computer verification

- Fully integrated with HMI

Software screenshot showing the eXLerate 2003 validation interface:

The main window title is "eXLerate 2003 - (Run) - Validations.XLR". The date "1/34/31 - 27/06/2007" is displayed at the top right.

The interface includes the following sections:

- Parameter Value** panel (top right):

Parameter	Value
Active Step	8 Calculating validation result
Current line pressure	44.88 bara
Number of records	3 11
Lower range value	0 bara
Upper range value	50 bara
Tolerance	0.15 bara
- Equipment used:** Dead weight tester (Dead-weight Tester Lagrange et Huot DWT 310 S/N LH 323-445-1), Weight certificate (Weights Lagrange et Huot WT S/N 00031).
- Witnesses:** Sellgas inc. (N. Armstrong, R. Reagan, G. Bush), Buygas corp. (L. Minelli, D. Day, L. Taylor).
- Validation Procedure Flowchart:**

```

graph TD
    Start(( )) --> Init[Initialization n := 1]
    Init --> Prep[Step n preparation]
    Prep --> Measure[Measure value of step n]
    Measure --> Stable{Stable reading?}
    Stable -- T --> Process[Process step]
    Process --> NextN[n := n+1]
    NextN --> Completed{Completed?}
    Completed -- T --> Finalize[Finalize validation]
    Finalize --> Completed(((Completed)))
    Stable -- F --> Error{Error?}
    Error -- T --> Reject[Reject step]
    Reject --> NextN
    Error -- F --> NextN
  
```
- Data Tables:** Five tables for PT-101, PT-102, PT-103, PT-104, and PT-105 showing Actual values, Reading [bara], Dev. [bara], Error [rel %], and Tolerance [bara].
- Function Keys:** F1 through F12, along with Print, Login, Alarms, and Trending.

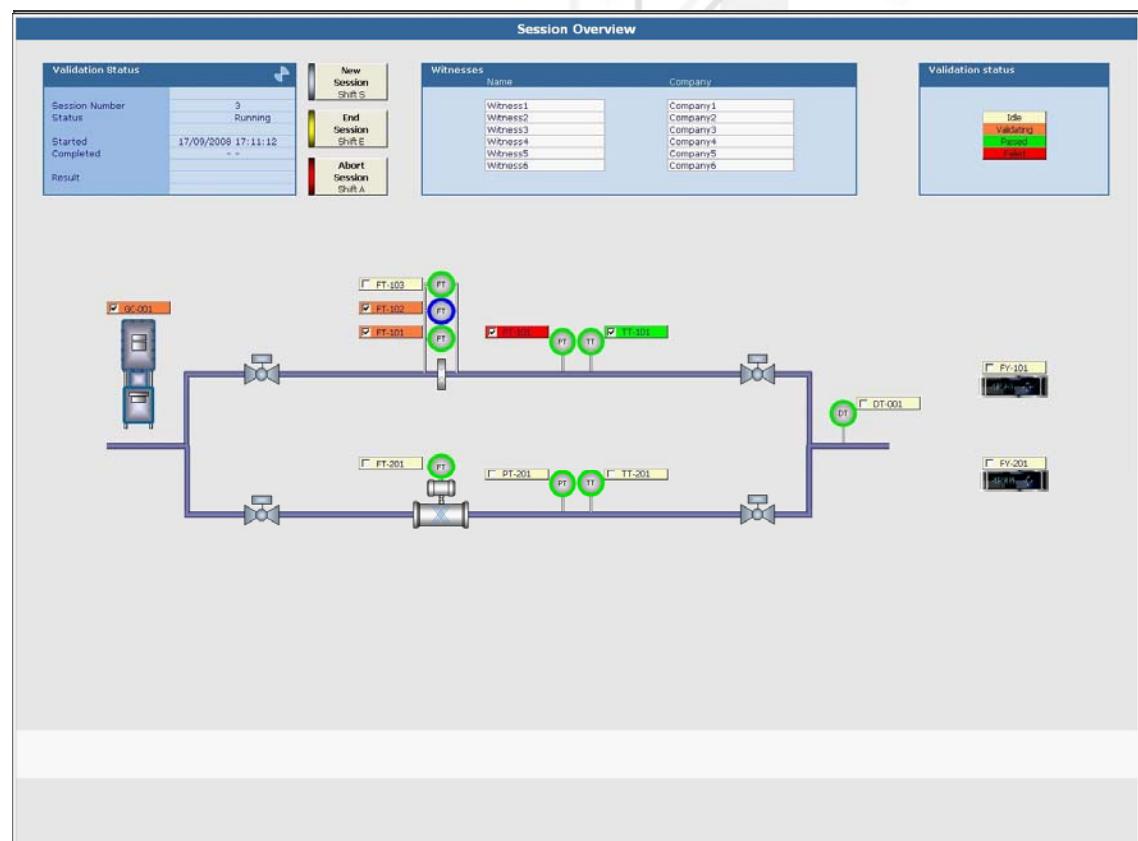

Session Manager

- Graphical Overview of station showing transmitters for validation

- Shows results of running / last Validation Session

- <New Session>:
The Operator selects the equipment to be validated
Validations are performed with the individual validation procedures

- Session is active:
Session Overview shows the running validation status

Single Transmitter Validation

- Shows the running / last validation.
- Start Validation : previous results are removed.
- results for the running step are calculated and displayed.
- With the radio buttons, the operator selects the next step.
- Supports storing results into database for Control Charts.

Instructions

Preparation
Before starting a validation, isolate the corresponding stream. Close the valves of the stream to the transmitter. Vent the pressure lines. Open the valve to the calibration equipment.

Select the calibration equipment. Enter the Witnesses. Press the <Start Validation> button.

Steps 1 - 11
Set up the calibration equipment to be close to the indicated value for the running step. Enter the reference value for the running step. Wait for the reading to stabilize. Select the next step.

End validation
When all steps are completed, press <End Validation>. The validation values and results are stored and a report is generated.

Abort
When the validation is aborted, the results are not stored. No report is being generated.

Finish
If you are finished, close the valves to the calibration equipment. Open the valves of the stream to the transmitter.

Multiple Transmitter Validation

- Validation of Multiple Transmitters with the same calibration equipment at the same time;
e.g. orifice plate with differential pressure transmitters.

- Same as Single Transmitter Validation.

- Supports storing results into database for Control Charts.

Instructions

Preparation Before starting a validation, isolate the corresponding stream. Close the stream valves to the transmitter and vent the pressure lines.	Steps 1 - 11 For each step, Set-up the calibration equipment close to the indicated value. Enter the reference value for the running step. Open the valves to the calibration equipment. Select the calibration equipment Enter the Witnesses Press the <Start Validation> button	End validation When all steps are completed, press <End Validation> The validation values and results are stored and a report is generated.
Abort When the validation is aborted, the results are not stored.	Finish If you are finished, close the valves to the calibration equipment. Open the stream valves to the transmitter.	

GC Validation

- ⌚ Shows the running / last validation.
- ⌚ Start Validation : previous results are removed.
- ⌚ results for the running step are calculated and displayed after each new GC Analysis.
- ⌚ Supports storing results into database for Control Charts.

Turbine validation report

Validation in principle:

- Integrated reporting
- Integrated SCADA/HMI
- Simple to verify: Excel based
- Fully user-definable
- Highly flexible, yet secured
- Redundant on all levels
- Significant installed base

Virtual Flow Computer calculations

- Period totalizers, high precision (64-bits)
- ISO-5167
- Liquid density calculations
- API-2540
- TP-25
- Other products

Special calculations

- Double precision floating point data
- Retentive flow totalizers
- Time series
- Flow weighted averages etc.

Linearization curves for meters

- Master meter applications supported straight in application

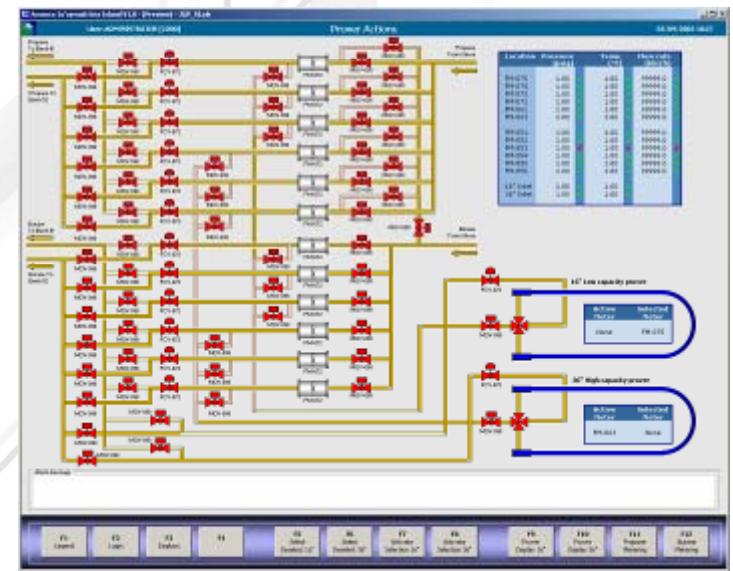

Proving

- Master-meter proving
- Compact proving
- Ball-proving

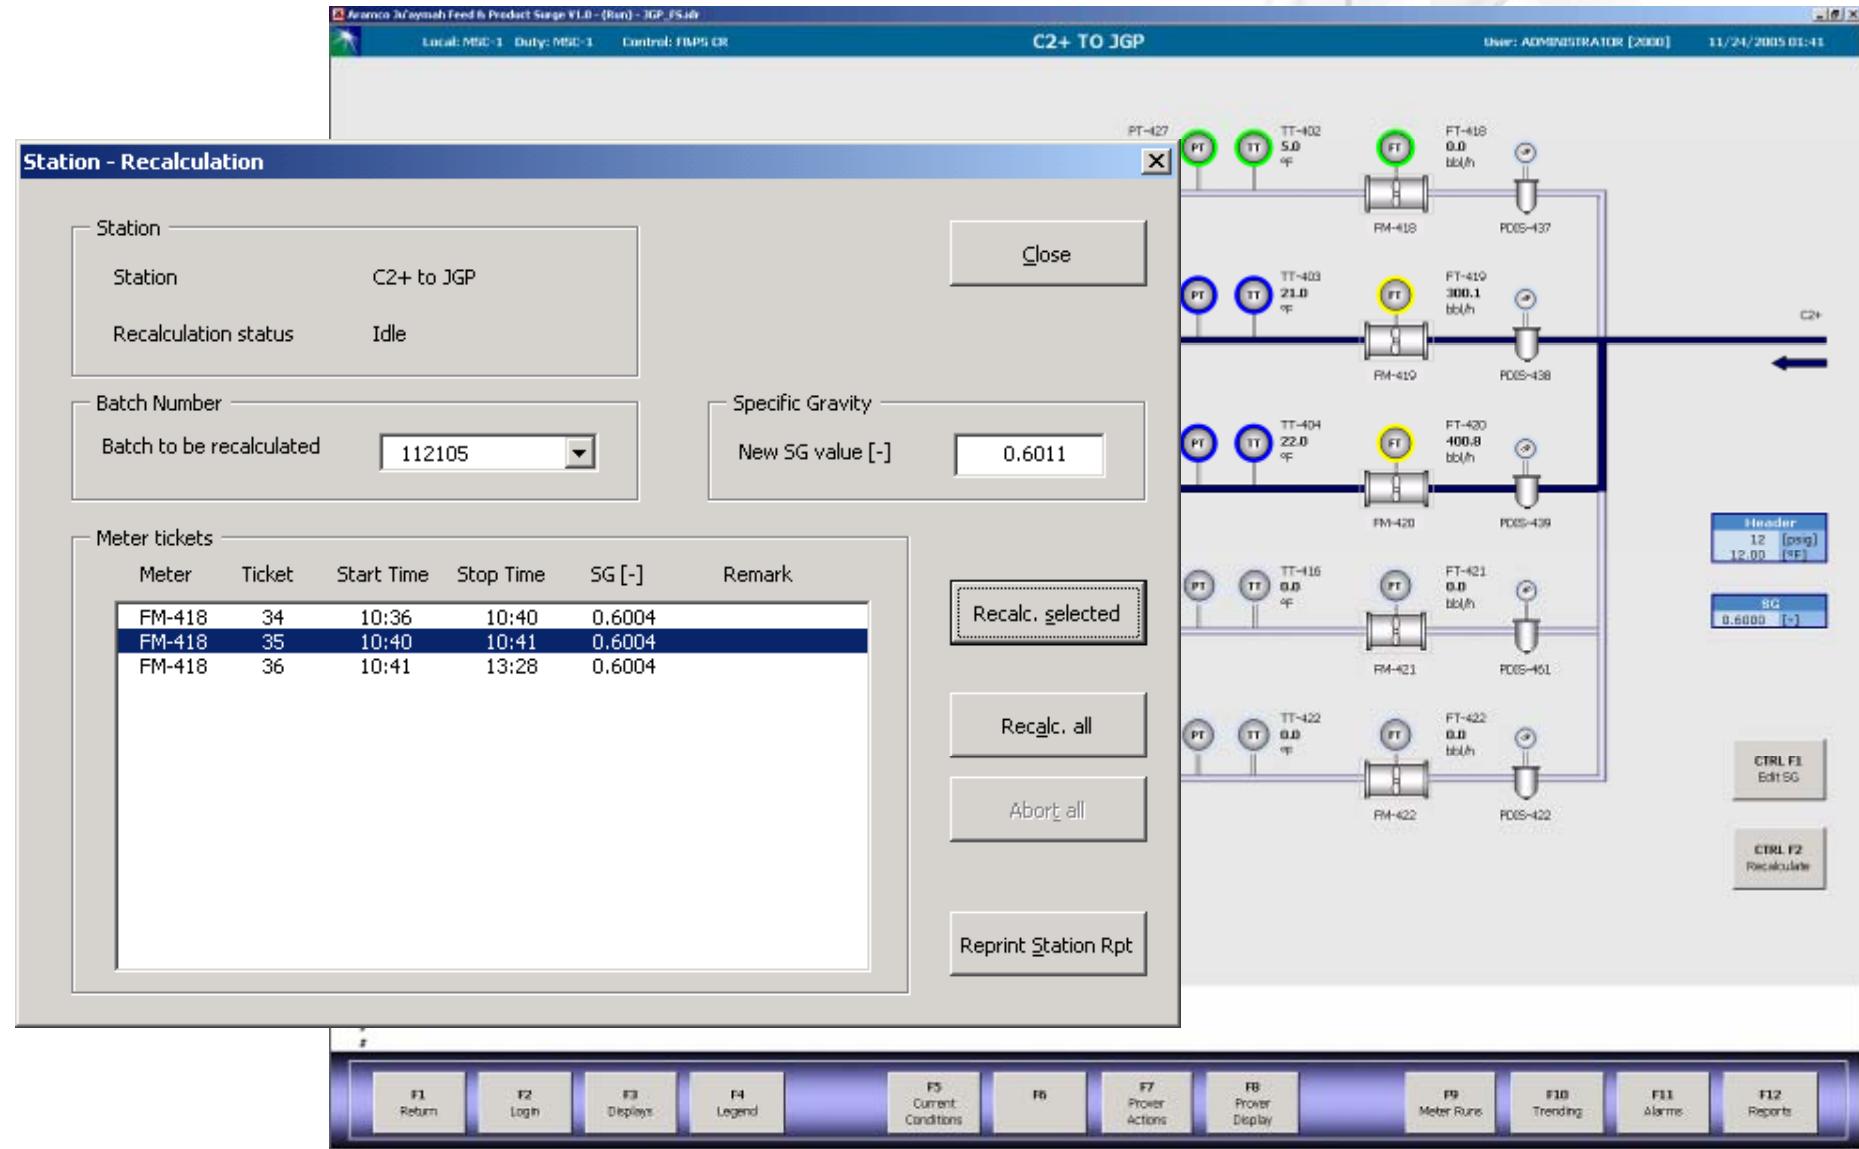

Batching

Validations & Instrument diagnostics

Audit trails

Automated fiscal recalculations

Meter proving – Flow computer

Prover Methods

- 🕒 Built-in from flow computers
- 🕒 User defined in application
- 🕒 Standard methods

Prover types

- 🕒 Ball provers
- 🕒 Compact provers
- 🕒 Master-meter proving

Result storage

- 🕒 HMI
- 🕒 Database
- 🕒 Reports
- 🕒 Archive

System: SVC-01 User: 1 [2000] Proving of meter 2 4/5/2004 12:27

Prove Status and Control signals

Prove status	Completed	Prove sequence successfully completed
Meter being proved	0	1
Prove run number	10	0
Prove counts	0	0
Number of passes per run	1	0
Current prove passes	0	0
Number of prover runs to average	10	0
Number of total prove runs	10	0

Master Meter selection

- Meter 1
- Meter 2
- Selected Master Meter 1
